Community Needs Assessment Workbook Contributors

List the names of people in your community, the organizations they represent, and the contributions they made to completing this workbook in Table 1 below.

Table 1. Workbook Contributors

Name	Organization	Contribution
Karen Sylvester	YES I CAN SPF Coordinator	Put the data together
Laurie Royal	CAC President	Oversight
Cynthia Johnson	YES I CAN fiscal agent	Input, dissemination of information and data
Kristen Sween	Big Horn County Counseling	Input, gave data
Diane Nuttall	Clerk of District Court	Input, gave data
Brandy Davidson	Director Big Horn County Youth Services	Interview
Chad Lindsay	Big Horn County Health Coalition Director SPF North End Coordinator	Interviews, lead meetings, input, dissemination of information, gathered data
Linda Harp	SPF South End Coordinator	Interviews, input, dissemination of information

Local Data Sources

In Table 2 below list all the local data sources used in this workbook as well as a description of the data, and where it came from.

Table 2. Local Data Sources

Data Source	Data Description	Data Location
Big Horn County Circuit Court	Court Data	Big Horn County Court House

Introduction

Wyoming received the Strategic Prevention Framework State Incentive Grant (SPF SIG) from the Federal Substance Abuse Mental Health Services Administration (SAMSHA) on September 30, 2004, along with 20 other states and territories.

The purpose of the project is to implement the five components of the SPF planning model at both state and community levels in Wyoming. The following diagram details this process (Center for Substance Abuse Prevention, 2005).

Figure 1. Five Steps of the Strategic Prevention Framework Process

At the state level, Wyoming has completed the needs assessment and funding allocation plan. Mobilization and capacity building take place throughout the project. Wyoming's needs assessment identified the targeted problem as the misuse of alcohol and its consequences, and Wyoming's allocation strategy funds all 23 counties and the Wind River Reservation as Prevention Framework (PF) community grantees. The first step for grantees is to complete a comprehensive needs assessment for their communities.

Outcome-Based Prevention

The foundation of the PF process is the outcome-based prevention model (Lowther & Birckmayer, 2006).

Figure 2. PF Needs Assessment Logic Model

In this model a community details its substance-related consumption and consequence data, researches the causal areas that may impact these problems, and chooses evidence-based policies, practices, and programs to address the identified causal areas.

Purpose

The purpose of this workbook is to help PF funded communities go through the outcome-based prevention model. The first step is to complete a comprehensive needs assessment. This means that grantees, and the community partnerships, must accurately assess their problems using epidemiological data, and they must do research to understand what may influence these problems. To be effective, you should not complete this workbook alone. Instead, you and your Community Advisory Council (CAC) should work together to complete this task.

Keep in mind that Wyoming has already identified the targeted need for this project—the misuse of alcohol.

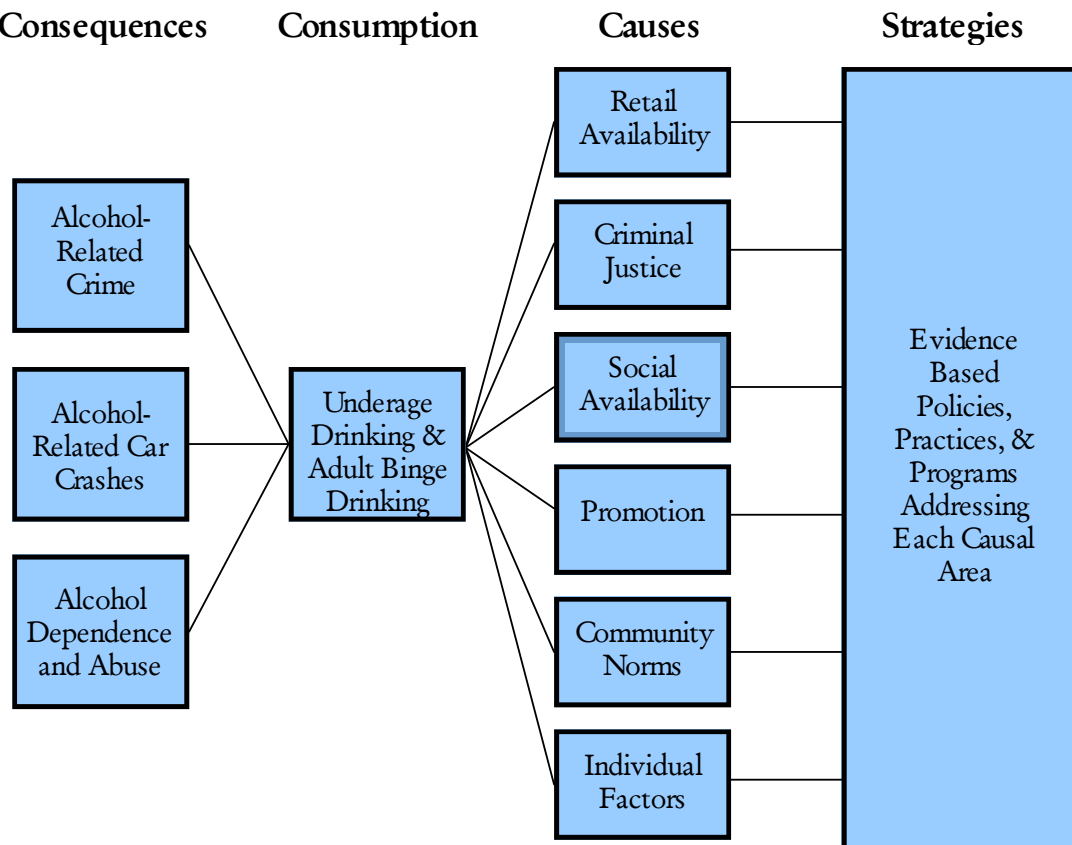

“Misuse of alcohol” means that:

1. The primary target for the PF is underage drinking, and adult binge drinking. Underage drinking refers to any use of alcohol by anyone under the age of 21, while adult binge drinking refers to those 18 years and older who have five or more drinks on any one occasion.
2. The secondary target for the PF is the most significant consequences of the misuse of alcohol in Wyoming: alcohol-related crime, alcohol-related motor vehicle crashes, and alcohol dependence and abuse.

Workbook Organization

The tasks that follow are based on the outcome-based prevention model and recent research detailing the causal areas of substance-related problems. There are four major sections (problems, causes, prioritization, and resource assessment). Within each there are data to collect and questions to answer. Following from Wyoming's targeted need (the misuse of alcohol) and the known causal areas, the previous model can be expanded to include evidence based strategies, as illustrated in Figure 3 (Birckmayer, Holder, Yacoubian, & Friend, 2004).

Figure 3. Outcome-Based Prevention Model

Each grantee must complete the tasks that follow to detail the problems and influences surrounding the misuse of alcohol in their community. This will lead to focused mobilization and capacity building, as well as aid in the prioritization of evidence-based strategies within the community's strategic plan.

The work that follows involves gathering data to illuminate both the problem(s) and the casual area(s) that contribute to the problems in your community. This is achieved by answering a series of questions. Most of the data you gather will exist in various data sources, but you will also have to do some original research. Data gathering includes:

- Existing survey results
- Original data collection
- Interviews with key partners and stakeholders

- A town hall meeting with interested community members and leaders

It must be noted that most of the existing local level data used in this workbook are available at the county level. Therefore, completion of this workbook may be more challenging for the Wind River Indian Reservation than for other communities. The Reservation will certainly have to collaborate with the Fremont County project, and at times alternative measures may need to be used. Grantee communities should complete this workbook as thoroughly as possible working with their Community Advisory Council and WYSAC researchers.

Collection of Existing Survey Results

Much of the data that will be used in this workbook will already have been publicly reported. When possible, you will be referred to a website or other public data source to find your community's information. In other areas, where local level data is less available, WYSAC has placed the existing survey results within this workbook's tables and appendices. Point estimates are used for simplicity, and it is acknowledged that these estimates may vary according to their margin of error. The instructions in each section will direct you and provide guidance on how to interpret the results from existing data sources.

In addition to the existing data sources that are specifically outlined in this workbook, local surveys or other local data are encouraged to be used as sources of auxiliary information to aid in the decision making process. For instance, many community colleges may have results from the National College Health Assessment (NCHA). In addition, your community may have already gathered survey results from businesses or from local law enforcement that may help in the needs assessment.

Interviews with Key Partners and Stakeholders

You will also interview key partners and stakeholders in your community to help provide a better picture of their concerns within your community regarding the misuse of alcohol. One particular set of stakeholders that you will be asked to interview are the law enforcement officials in your community. A sample protocol for these law enforcement interviews is given in this workbook's Appendix B, and a brief description of the information that is to be gathered in the law enforcement interviews is provided in the law enforcement section. Interviews with other stakeholders will provide local information in other areas of this workbook.

Town Hall Meeting

As part of the data collection, you will conduct a town hall meeting to gather community views regarding what factors influence the misuse of alcohol in your community. In particular, you will need to find out how the community thinks social availability, community norms, and individual factors impact the misuse of alcohol in your community. A description on how to conduct the town hall meeting, and the types of information that will need to be gathered from the town hall meeting is provided in Appendix C.

Collection of Original Data

In several areas of this workbook you will be asked to gather information using specified designs. This data collection will include such things as counting the number of billboards which advertise alcohol, or counting the number of events where alcohol companies or distributors are sponsors. The point of this data collection is to gather information directly from your community by observation or library research. In all cases, the original data collection will be measures that are easily gathered. The original data that you collect will be sent to WYSAC by April 30, 2007. The WYSAC researchers will use the data from all 24 grantees to derive state level comparisons and, where appropriate, grantee rankings. The results from this original research will be returned to you by May 15, 2007, so you can integrate that information into this workbook. Table 3 below provides a quick reference for the deadlines for the collection of original data as well as the workbook itself.

Table 3. Deadlines for Original Data Submission, Return of Aggregate Results, and Final Workbook Completion

Due Date	Product
April 30, 2007 Send the following products to WYSAC	Percentage of drive-up liquor windows, percentage of convictions for alcohol-related crime, number of officers assigned to alcohol-related issues and crimes, percentage of community events and festivals with alcohol-related sponsors, and number of billboards advertising alcohol, number of advertisements in local newspapers advertising alcohol
May 15, 2007	Aggregate data with state level results sent back to communities for comparison
June 15, 2007	Community Needs Assessment Workbook completed and sent to the Substance Abuse Division

A final copy of the Community Needs Assessment Workbook should be submitted electronically to:

Lisa Laake, MPH, CHES
Wyoming Mental Health and Substance Abuse Services Division
6101 Yellowstone Road, Suite 220
Cheyenne, WY 82002
llaake@state.wy.us
(307) 777-3352

Problems

Task One:
**Explore Alcohol Consequences and Consumption Data in Your
Community in Order to Identify What Problems
are of Greatest Concern**

Consequences

This first section looks at alcohol-related consequence data and will help you identify which alcohol-related consequences are of greatest concern in your community. Alcohol-related consequences are defined as the social, economic, and health problems associated with the use of alcohol, such as crime and car crashes. It is recognized that not all communities will experience exactly the same problems, and to help identify individual community problems, you will conduct a needs assessment in relation to alcohol misuse and its consequences.

Alcohol-Related Crime

One of the major consequences of drinking alcohol is alcohol-related crime. Your task will be to obtain information on alcohol-related arrest rates in your community by going to the following website: <http://attorneygeneral.state.wy.us/dci/>. Once you have arrived at this website, the following directions will allow you to find your county's arrest results.

- In the middle of the page, click the link titled "Crime in Wyoming Reports."
- In the middle of the page, click and select the year in which you are interested (you will need information from the six most recent annual reports.)
- Select the county in which you are interested (county information starts about page 33 in each of the annual reports.)
- Find your county's arrest numbers for each individual year. Record in Tables 4 through 9, the number of arrests for driving under the influence, liquor law violations, and drunkenness (within the annual reports, adult information can be found in the left hand column, while juvenile information in the right hand column.) For Tables 4, 5, and 6 add adult males and females together and put the totals in the Tables. For Tables 7, 8, and 9 add juvenile males and females together and put the totals in the Tables.)
- Tables 4 through 9 also request your county population estimates. These numbers are available in the workbook Appendix A (Tables B and C) using numbers from the US Census Bureau. Adult crime estimates will be based on the population estimates of people who are over 18 (Table B). The juvenile population will use the results in Table C for people who are 10 to 17.
- To obtain the totals from 2000-2005, sum all six years together.
- To work out the rate per 100,000 population, divide the number of county arrests for the year(s) by the county population for those years and multiply by 100,000.
- Under the rate comparison column use a "+" if your county rate is higher than the Wyoming rate, use "-" if your county rate is lower than the Wyoming rate, and use "=" if the rates are about the same.

For Wyoming's rate per 100,000 population, the calculations would look like this:

$$\begin{aligned}\text{Adult DUI rate (2000-2005)} &= \frac{\text{Number of Adult DUI Arrests in Wyoming}}{\text{Wyoming Adult Population for the Time Period}} * 100,000 \\ &= \frac{26,490}{2,277,429} * 100,000 \\ &= 1163.15\end{aligned}$$

Table 4. Driving under the Influence (Adults)

Year	Number of County Arrests	County Population	Rate per 100,000 Population	Wyoming Number of Arrests	Wyoming Rate per 100,000 Population	Rate Comparison
2000	32	8,183	391.05	4,386	1197.48	-
2001	21	8,195	256.25	4,357	1178.21	-

2005	0	1,374	0.00	42	77.66	-
2000-05	6	8,915	67.30	236	66.57	=

Other Local Data

Feel free to consider and analyze other local data that will help identify and detail problems around the consequences of alcohol-related crime. For example, you may have information from local surveys, you may know about trouble spots, or specific alcohol-related strategies that the police are implementing. You may have local data on Minors in Possession (MIP) arrests and/or citations. If you have other local data describe the results here.

Question 1.

Based on Tables 4 through 9 and other local data, how does alcohol-related crime in your community compare to alcohol-related crime across the state? Is your problem bigger, smaller or about the same? Discuss the differences. Do you think the arrest data accurately reflects the related problems in your community, why or why not?

Big Horn County seems to be consistently lower in almost every category; Big Horn County by and large has less crime than larger areas in the state. When crime does happen it is usually minor, vandalism, fights, ect. Due to the size of our communities it is felt that drunk driving is not pursued as rigorously as it should be, looking the other way is common place. Also, in small communities, where everyone knows or is related to everyone else including law enforcement, not pursuing violations is a fact. Minors drinking and drunk adults are accepted as a way of life here and excused. Underage drinking is not only accepted but expected by some in the community; “a right of passage” so to speak. They did it as teenagers and they turned out all right. There are also people who feel strongly that the legal drinking age should be 18 or at the very most 19. It is felt that our biggest problem is the age group of 18 – 20 year olds and with the early twenties group providing alcohol to the underage kids.

To provide another set of estimates for your county, the Youth Risk Behavior Survey (YRBS) data may often be obtained from your local schools and/or school districts. If you can obtain this information you will want to include this in Tables 10 through 13.

- Under the percentage comparison column in Tables 10 and 12 use a “+” if your county percentage is higher than the Wyoming percentage, use “-” if your county percentage is lower than the Wyoming percentage, and use “=” if the percentages are about the same.
- In Tables 11 and 13, record whether the time trend is increasing using a “+” symbol, a “-” symbol for a decreasing trend, a “=” symbol for a stable trend, and a “?” for an unclear trend.

Table 10. Percentage of Students That Said They Rode in a Car or Other Vehicle Driven by Someone Who Had Been Drinking Alcohol One or More Times during the past 30 Days (2005 YRBS)

Grade	County	Wyoming	Percentage Comparison
9 th		27.5%	
10 th		28.2%	
11 th		33.3%	
12 th		30.2%	
9 th -12 th		29.7%	

Table 11. Percentage of Students That Said They Rode in a Car or Other Vehicle Driven by Someone Who Had Been Drinking Alcohol One or More Times during the past 30 Days (2001-2005 YRBS)

9 th -12 th				

Table 12. Percentage of Students That Said They Drove a Car or Other Vehicle When They Had Been Drinking Alcohol One or More Times during the past 30 Days (2005 YRBS)

Grade	County	Wyoming	Percentage Comparison
9 th		6.4%	
10 th		13.3%	
11 th		21.0%	
12 th		21.3%	
9 th -12 th		15.3%	

Table 13. Percentage of Students That Said They Drove a Car or Other Vehicle When They Had Been Drinking Alcohol One or More Times during the past 30 Days (2001 - 2005 YRBS)

Grade	2001 County Data	2003 County Data	2005 County Data	Trend
9 th				
10 th				
11 th				
12 th				
9 th -12 th				

Question 2.

Based on Tables 10 and 12, how does student drinking and driving in your community compare to student drinking and driving across the state? Is your problem bigger, smaller, or about the same? Discuss the differences. From Tables 11 and 13, discuss whether the trends in your community are increasing, decreasing, remaining stable or are unclear? Discuss the differences.

Comment; students don't get too excited about drinking and driving or riding with someone who has been as they see their parents and other adults do it all the time. The best commercials on right now are the ones that state that "driving with a buzz" is drunk driving. Being impaired doesn't mean you can't walk.

Alcohol-Related Car Crashes

Another targeted consequence of the misuse of alcohol for Wyoming's PF project is car crashes related to alcohol use.

For your community assessment, you will need to obtain information on the percentage of alcohol-related motor vehicle fatalities in your community by going to the following website:
<http://www-fars.nhtsa.dot.gov/>

- From the website, select states, under the report list on the left hand side.
- Then click alcohol.
- The first table from this website is titled "Persons Killed, by State and Highest Blood Alcohol Concentration in Crashes;" from this table, click Wyoming which will give you the county rates.
- In Table 14 record the following three numbers under your county column. First report the number from the website column headed "total killed in alcohol-related crashes," second report the percentage from the website column headed "total killed in alcohol-related crashes," and third report the number from the website column headed "total killed."
- Using the look-up box just above the right hand corner of the website table, change the year and repeat the previous step until you have recorded all the annual information in Table 14.
- To obtain the percentage from 2000 to 2005, you will need to sum the number of alcohol-related fatalities across the listed years, and also sum the total number of fatalities across the listed years. To obtain the percentage, simply divide the total number of alcohol-related fatalities in your county by the total number of crash fatalities, and then multiply by 100.
- Under the percentage comparison column use a "+" if your county percentage is higher than the Wyoming percentage, use "-" if your county percentage is lower than the Wyoming percentage, and use "=" if the percentages are about the same.

Table 14. Percentage of Alcohol-Related Fatalities

Year	County			Wyoming	Percentage Comparison
	# that were Alcohol- Related	Percent Alcohol- Related	Total # Killed	Percent	
2000	5	42%	12	30%	+
2001	2	50%	4	44%	+
2002	0	0%	5	38%	-
2003	1	100%	1	38%	+
2004	3	75%	4	36%	+
2005	0	0%	5	38%	-
2000-2005	11	35%	31	38%	=

- To complete Table 15 you will need to return to the [state alcohol rates](#) by either clicking the back button on your web browser or by repeating the first bulleted steps above.

- After returning to the state rates, scroll down to the table titled, “Drivers Involved in Fatal Crashes, by State and Blood Alcohol Concentration of the Driver.” Then click on the Wyoming link within that table to get to the county level results.
- For your county, record the following results in Table 15:
 - First report the number and percent listed under “Any Alcohol (BAC=0.01+).”
 - Second report the number from the column headed “Total Drivers Involved in Fatal Crashes.”
- Using the look-up box just above the right hand corner of the website table, change the year and repeat the previous step until you have recorded all the annual information in Table 15.
- To obtain the percentage from 2000 to 2005, you will need to sum the number of drivers with BAC levels greater than 0.01, and sum the total number of drivers involved in fatal crashes across the listed years. To obtain the percentage, divide the number of drivers who had been drinking by the total number of drivers who had been involved in a fatal crashes, then multiply by 100.
- Under the percentage comparison column use a “+” if your county percentage is higher than the Wyoming percentage, use “-” if your county percentage is lower than the Wyoming percentage, and use “=” if the percentages are about the same.

Table 15. Percentage of Drivers Involved in Fatal Crashes That Have Had a Drink

Year	County			Wyoming	Percentage Comparison
	# with BAC ≥ 0.01	Percent Alcohol- Related	Total # Involved in Fatal Crashes	Percent	
2000	0	0%	3	22%	-
2001	1	50%	2	31%	+
2002	1	25%	4	28%	-
2003	1	100%	1	26%	+
2004	3	75%	4	26%	+
2005	0	0%	4	31%	-
2000-2005	6	33%	18	28%	+

To complete Tables 16 and 17 you will need to obtain information on the number and rate of alcohol-related crashes from 2002 to 2005. Like the previous tables in the workbook, you will need to compile numbers from several annual reports and then calculate the percentage across all the requested years. The following directions will help explain how to do this.

- In your internet web browser go to the following website:
<http://dot.state.wy.us/Default.jsp?sCode=hwyrcr>.
- Click on the year in which you are interested on the right hand side.
- Click the link titled “Alcohol and Wyoming Crashes.”
- On approximately page number 114 there is a table titled “Alcohol Involved Fatal Crashes.”
- In Table 16 record the number of alcohol-related fatalities for your county.
- In Table 17 record the number of alcohol-related crashes for your county.

- For 2002-2005 sum all the years together.
- For information on county population see Appendix A (Table A) of this workbook, and use these figures for county population.
- To work out the rate per 100,000 population, divide the number of county arrests for the year(s) by the county population for those years and multiply by 100,000.
- Under the rate comparison column use a “+” if your county rate is higher than the Wyoming rate, use “-” if your county rate is lower than the Wyoming rate, and use “=” if the rates are about the same.

Table 16. Alcohol-Related Fatalities

Year	Number of County Fatalities	County Population	Rate per 100,000 Population	Number of Wyoming Fatalities	Rate per 100,000 Population	Rate Comparison
2002	1	1,502	66.58	58	11.62	+
2003	0	1,457	0	50	9.96	-
2004	3	1,432	209.5	53	10.48	+
2005	0	1,374	0	54	10.60	-
2002-2005	4	5,765	69.38	215	10.66	+

Table 17. Alcohol-Related Fatal Crashes

Year	Number of County Fatal Crashes	County Population	Rate per 100,000 Population	Number of Wyoming Fatal Crashes	Rate per 100,000 Population	Rate Comparison
2002	1	1,502	66.58	53	10.62	+
2003	0	1,457	0	43	8.57	-
2004	3	1,432	209.5	50	9.88	+
2005	0	1,374	0	51	10.01	-
2002-2005	4	5,765	69.38	197	9.77	+

To complete Tables 18 and 19, you will be using the same website:

<http://dot.state.wy.us/Default.jsp?sCode=hwycr>. The following directions explain how to obtain the needed information about Alcohol-Related Injury Crashes, and Alcohol-Related Property Crashes.

- After going to the website listed above, click the year in which you are interested.
- Click on the link about “Alcohol Involved Injury Crashes.”
- On approximately page number 125 there is a table titled “Alcohol Involved Injury Crashes.”
- In Table 18 record the number of alcohol-related injury crashes for your county.
- To complete Table 19 select alcohol-involved PDO (property damage only) crashes and from about page 137 find your county’s number of alcohol-related property crashes and record those numbers in Table 19.
- For both tables sum 2003-2005 together.
- For information on county population see Appendix A (Table A) of this workbook and use these figures for county population.
- To work out the rate per 100,000 population, divide the number of county arrests for the year(s) by the county population for those years and multiply by 100,000.

- Under the rate comparison column use a “+” if your county rate is higher than the Wyoming rate, use “-” if your county rate is lower than the Wyoming rate, and use “=” if the rates are about the same.

Table 18. Alcohol-Related Injury Crashes

Year	# of County Injuries	County Population	Rate per 100,000	# of Wyoming Injuries	Rate per 100,000	Rate Comparison
2003	8	1,457	549.07	471	93.84	+
2004	7	1,432	488.83	422	83.42	+
2005	10	1,374	727.80	493	96.80	+
2003-2005	25	4,263	586.44	1,386	91.36	+

Table 19. Alcohol-Related Property Crashes

Year	# of County Property Crashes	County Population	Rate per 100,000	# of Wyoming Property Crashes	Rate per 100,000	Rate Comparison
2003	6	1,457	411.81	508	101.21	+
2004	6	1,432	419	473	93.50	+
2005	12	1,374	873.36	576	113.10	+
2003-2005	24	4,263	562.98	1,557	102.63	+

Other Local Data

Feel free to consider and analyze other local data that will help identify and detail problems around the consequences of alcohol and motor vehicles. For example, you may have information from local surveys, or you may know about certain trouble spots. If you have other local data describe the results here.

Question 3.

Based on Tables 14 through 19 and your local level data, how do alcohol-related car crashes in your community compare to alcohol-related car crashes across the state? Is your problem bigger, smaller or about the same? Discuss the differences.

The problem in Big Horn County seems to fluctuate when compared to the state data, but overall we tend to be higher. This could be attributed to some of the statements that were made in question #1. When things are finally dealt with here it is because they can no longer be ignored or “swept under the rug.” Juveniles being killed in car crashes or being involved in car crashes due to alcohol are all too often the consequence here. The communities then go through a period of finger pointing and mourning, but it is short lived. All too often the funerals involve drinking to the dead or candlelight vigils followed by drinking and “crying in their beer”. An accident is looked at as a warning to be more careful, not necessarily to change a behavior. Children get in trouble from their parents for getting caught doing wrong, not for doing the wrong thing. We are a community that tends to send mixed messages, especially to our youth.

Alcohol Dependence and Abuse

Consider Table 20 below showing the rate by county of residence for treatment admissions for alcohol as the primary or secondary drug. This data comes from the Wyoming Mental Health and Substance Abuse Services Division (MHSASD) for Fiscal Year 2005. Those counties at the top of Table 20 have the largest rates. The Wyoming rate has been included in the table and is shaded to provide a comparison. Anything above this shaded line is higher than the state average and anything below this shaded line is lower than the state average.

Table 20. Rate of Referrals per 100,000 Population for Alcohol Treatment in Wyoming by County of Referral (MHSASD, 2005)

County	Number Referred	County Population	Rate per 100,000 Population
Platte	184	8,619	2134
Fremont	769	36,491	2107
Hot Springs	91	4,537	2006
Teton	366	19,032	1923
Sheridan	506	27,389	1847
Albany	536	30,890	1735
Washakie	134	7,933	1689
Laramie	1,299	85,163	1525
Campbell	570	37,405	1524
Natrona	1,052	69,799	1507
Sublette	101	6,926	1458
Wyoming	7,358	509,294	1445
Carbon	219	15,331	1428
Sweetwater	509	37,975	1340
Goshen	159	12,243	1299
Big Horn	146	11,333	1288
Niobrara	28	2,286	1225
Weston	79	6,671	1184
Converse	130	12,766	1018
Lincoln	122	15,999	762
Johnson	50	7,721	648
Uinta	129	19,939	647
Crook	39	6,182	630
Park	140	26,664	525

Other Local Data

Feel free to consider and analyze other local data that will help identify and detail problems around the consequences of alcohol dependence and abuse. For example, you may have information from local surveys, or you may have information from treatment facilities in your communities. If you have other local data describe the results here.

Question 4.

Based on Table 20 and your local level data, how does alcohol dependence and abuse in your community compare to alcohol dependence and abuse across the state? Is your problem bigger, smaller or about the same? Discuss the differences.

We are below the state percentage, but we are still pretty high. It is felt that this number may be higher, but when individuals get to this point they may admit themselves and we have a considerable number that go to Montana for treatment. Going to treatment in Big Horn County is a well kept secret for some individuals and their families. Once again, in a small community, people are quite judgmental and gossip is a way of life, people try to avoid some of that any way they can.

Final Consequences Question

Question 5.

Based on your answers to Questions 1 through 4, what are your community's major concerns surrounding the consequences of the misuse of alcohol? Justify your decision.

From the previous answers and importantly, from law enforcement interviews and town hall meetings, the biggest concern, heard again and again, was enforcement of laws and consequences. There is a feeling that the criminal justice system needs to get tougher and hold people accountable.

There are a lot of changes taking place in Big Horn County that may ultimately affect some of the many concerns expressed during this "workbook process". Out of the four school districts in our county, three will have new superintendents this year. Greybull is in the process of starting up a police force and no longer using the sheriff's department, We elected a new county attorney who is just finishing up her training and a new sheriff. We have a lot of new personnel in key roles who could potentially make some big changes locally and county wide.

Besides enforcement and consequence issues the "good ole' boy" network is perceived to be at work here and there is resentment and concern. Getting the public to give specifics and details was quite difficult as they were not sure how public this document may become and were very uneasy as to what the backlash may be. We do have concerned citizens about our situation here, but is tempered with fear and protecting oneself and

family. Change will be difficult due to these assumptions and feelings.

Consumption

This section looks at consumption data and will help you identify any consumption concerns in your community. Consumption data includes information about the percentage or number of underage people who drink alcohol, the percentage or number who engage in binge drinking (five or more drinks in one sitting), or the percentage or number of adults who engage in heavy drinking (more than 60 drinks a month for males, and more than 30 drinks a month for females).

Underage drinking

Complete Tables 21 through 24 using the Prevention Needs Assessment (PNA) data for your county. To obtain your county's 2006 Prevention Needs Assessment (PNA) report go to the following website: <http://www.uwyo.edu/wysac/HealthEducation/PNA/Reports.aspx>

- After going to the website, click the link titled “open” next to your county’s name.
- After downloading the report, go to Appendix A (Table 12-Table 15), and record the 30-day substance use alcohol data for 2006 in Table 21, and binge drinking rates for your community for 2006 in Table 23.
- To obtain your county’s quartile, find Table 1 in the report (should be around page 10), find alcohol under 30-day substance use and record the quartiles for each grade level in Table 21; next find binge drinking under heavy substance use and record the quartiles for each grade level in Table 23 of this workbook. Note, if you are in the 1st quartile then your rate is lower than 75% of the other counties in Wyoming. If you are in the 4th quartile then your rate is in the top 25% of all counties in Wyoming.
- Under the percentage comparison column in Tables 21 and 23 use a “+” if your county percentage is higher than the Wyoming percentage, use “-” if your county percentage is lower than the Wyoming percentage, and use “=” if the percentages are about the same.
- Using information from Appendix A in your County’s PNA Report, record in Table 22, the 30-Day Alcohol Use rates for 2001, 2004, and 2006. Record the Binge Drinking rates in 2001, 2004 and 2006 in Table 24. In both tables, record whether the time trend is increasing using a “+” symbol, a “-” symbol for a decreasing trend, a “=” symbol for a stable trend, and a “?” for an unclear trend.

Table 21. Percentage of Students Who Have Had a Drink in the past 30 Days (2006 PNA)

Grade	County	Wyoming	County Quartile	Percentage Comparison
6 th	8.7%	6.7%	4	+
8 th	27.2%	27.1%	2	=
10 th	32.4%	39.9%	1	-
12 th	36.8%	48.2%	1	-

Table 22. Percentage of Students Who Have Had a Drink in the past 30 Days (2001 - 2006 PNA)

Grade	2001 County Data	2004 County Data	2006 County Data	Trend
6 th	1.4%	1.9%	8.7%	+
8 th	15.4%	13%	27.2%	+
10 th	30.6%	32.7%	32.4%	+
12 th	43.5%	43.1%	36.8%	-

Table 23. Percentage of Students Who Have Had More Than Five Drinks in a Row in the past Two Weeks (2006 PNA)

Grade	County	Wyoming	County Quartile	Percentage Comparison
6 th	4.1%	4.1%	2	=
8 th	16%	16.2%	3	=
10 th	20.5%	25.2%	2	-
12 th	24.8%	32.3%	1	-

Table 24. Percentage of Students Who Have Had More Than Five Drinks in a Row in the past Two Weeks (2001- 2006 PNA)

10 th	22.4%	21.3%	20.5%	-
12 th	32.3%	33.8%	24.8%	?

To provide another set of estimates for your county, the Youth Risk Behavior Survey (YRBS) data may often be obtained from your local schools and/or school districts. If you can obtain this information you will want to include this in Tables 25 through 28.

Table 25. Percentage of High School Students Who Have Had a Drink in the past 30 Days (2005 YRBS)

Grade	County	Wyoming	Percentage Comparison
9 th		33.7%	
10 th		45.7%	
11 th		48.6%	
12 th		55.0%	
9 th -12 th		45.4%

9 th				
10 th				
11 th				
12 th				
9 th -12 th				

Other Local Data

Feel free to consider and analyze other local data that will help identify and detail problems around underage drinking. A few examples include, (a) your community may have its own specific alcohol survey involving underage drinking, or (b) your community may want to consider college data like the National College Health Assessment (NCHA) data if there is a community college or university in your community, or (c) data from alternative schools if there is one in your community. If you have other local data describe the results here.

Question 6.

Based on Tables 21 and 25, and your community's own local data, how does student 30-day use of alcohol in your community compare to student 30-day use of alcohol across the state? Discuss the differences. Is your problem bigger, smaller, or about the same? From Tables 22 and 26, discuss how the trends in your community are increasing, decreasing, remaining stable or unclear? Discuss the differences.

Our student 30-day use appears to be decreasing as our students get older compared to the state.

Our 6th grade students drink more than the state average and then the stats steadily decrease. Our communities questioned that data and theorized that as students get older; drinking becomes more acceptable and is not as actively pursued. There are reports of kids being caught and instead of being arrested or parents called as they are with younger students they are told to dump out their drinks and to go home.

Once again the tables indicate that use is increasing in grades 6-8-10 to decrease in grade 12. This could be explained by "this group of kids" as being an exception or is it "head turning" as indicated in the previous paragraph.

Question 7.

Based on Tables 23 and 27, along with your community's own local data, how does student binge drinking in your community compare to student binge drinking across the state? Discuss the differences. Is your problem bigger, smaller, or about the same? From Tables 24 and 28, discuss how the trends in your community are increasing, decreasing, remaining stable or unclear? Discuss the differences.

Binge drinking doesn't appear to be as big a problem as it is when compared to state percentages. We are equal in 6th and 8th grades and decrease in the 10th and 12th grades. Is it that our students are more social drinkers than binge drinkers? No one seemed to have an answer or theory to that question.

The data from table 24 is unclear and it is all over the place. No conclusions could really be drawn from the data. Once again the question was asked, "Is what we see due to the different cycles of kids we see as they come through in different classes?" Also some wondered if this trend may be due to years and classes that ATOD programs were started and then stopped.

Adult drinking

Consider the following two tables for adult binge drinking and heavy drinking rates taken from the 2001-2005 Behavioral Risk Factor Surveillance Survey (BRFSS). To compare individual counties to Wyoming as a whole, Wyoming has been included in the tables and is shaded. Anything above this shaded line is higher than the state average and anything below this shaded line is lower than the state average.

Table 29. Percentage of Adults (18 Years and Older) Who Report Binge Drinking, Defined as Having Five or More Drinks in a Row in the past 30 Days (2001-2005 BRFSS)

County	Percentage
Albany	23.0%
Sublette	21.9%
Teton	21.8%
Campbell	19.9%
Sweetwater	19.2%
Niobrara	16.9%
Laramie	16.8%
Wyoming	16.5%
Johnson	16.4%
Crook	16.3%
Big Horn	15.8%
Natrona	15.8%
Converse	15.4%
Carbon	15.3%
Fremont	14.7%
Hot Springs	14.4%
Park	14.4%
Goshen	13.9%
Washakie	13.1%
Platte	12.9%
Weston	12.9%
Sheridan	12.8%
Lincoln	12.6%
Uinta	12.4%

Table 30. Percentage of Adults (18 Years and Older) Who Report Heavy Drinking, 60 Drinks in the past 30 Days for Men and 30 Drinks in the past 30 Days for Women (2001-2005 BRFSS)

County	Percentage
Teton	9.1%
Albany	8.7%
Sublette	7.7%
Converse	6.0%
Campbell	5.7%
Crook	5.7%
Johnson	5.5%
Natrona	5.5%
Sweetwater	5.4%
Carbon	5.3%
Fremont	5.2%
Niobrara	5.2%
Wyoming	5.2%
Park	4.9%
Laramie	4.5%
Platte	4.3%
Big Horn	4.1%
Lincoln	3.9%
Washakie	3.9%
Weston	3.7%
Goshen	3.3%
Sheridan	3.2%
Uinta	3.2%
Hot Springs	3.0%

Other Local Data

Feel free to consider and analyze other local data that will help identify and detail problems around adult drinking. For example, your community may have its own specific alcohol survey, or your community may want to consider college surveys like the National College Health Assessment (NCHA) data if there is a community college or university in your community. If you have other local data describe the results here.

Question 8.

Based on Tables 29 and 30, along with your community's other local data, how does adult binge drinking, and adult heavy drinking in your community compare to adult binge drinking, and adult heavy drinking across the state? Is your problem bigger, smaller, or about the same? Discuss the differences.

Big Horn County is below the state percentages on binge drinking and heavy drinking. It would be interesting to have the data divided between male and females. Although we are below the state on binge drinking being the 10th highest out of 23 counties is still alarming. We think why we are statistically higher on binge drinking compared to heavy drinking could be a prevalent attitude here of when the work week is over it is time to party! The public attitude here is overwhelmingly that an alcoholic drink or two a day is NOT heavy drinking – was the reporting honest?

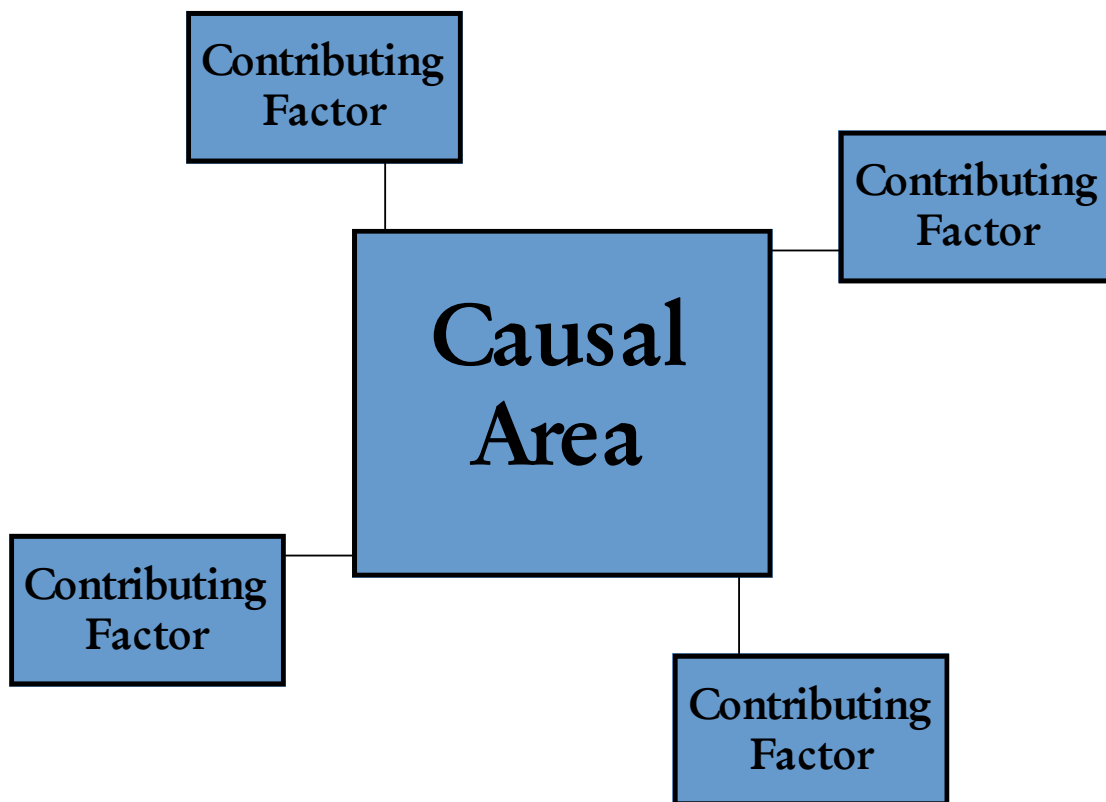

Final Consumption Question

Question 9.

Based on the consumption data analyzed here and on your answers to Questions 6 through 8, what are your community's major concerns surrounding the problem of underage drinking, adult binge drinking, and adult heavy drinking? Justify your decision.

Big Horn County's biggest concern seems to be binge drinking when it comes to the adult population and underage drinking in general when the data is looked at. The fact that this way of life is accepted, almost expected is the biggest concern. Adults set the example for the youth and the youth are great imitators.

Causal Areas

Task Two:
Gather Data on Six Causal Areas

Retail Availability

Liquor Licenses Per Capita

The most fundamental way to understand retail availability is the number of opportunities people have to buy alcohol. Consider the following table which lists the number of liquor licenses issued in each county. Counties are ordered based on their rates of liquor licenses per 100,000 population over the age of 14. The population of those 14 years and older is used to be consistent with research done by the National Institute on Alcohol Abuse and Alcoholism regarding sales per gallon of ethanol. To compare individual counties to Wyoming as a whole, Wyoming has been included in the table and is shaded. Anything above this shaded line has rates that are higher than the state average and anything below this shaded line have rates that are lower than the state average. This table includes all liquor license types except special event and malt beverage licenses. The included license types are:

- Retail liquor licenses
- Restaurant liquor licenses
- Limited liquor licenses
- Resort licenses
- Microbrewery permits
- Winery permits

Table 31. Liquor Licenses per 100,000 Population over 14 Years Old (2005 Department of Revenue and US Census Bureau)

County	Liquor Licenses	Population	Rate per 100,000 Population
Teton	102	16396	622.10
Niobrara	11	1991	552.49
Sublette	32	5851	546.92
Crook	28	5268	531.51
Carbon	61	13006	469.01
Hot Springs	18	3987	451.47
Johnson	27	6644	406.38
Platte	29	7352	394.45
Weston	22	5771	381.22
Big Horn	33	9339	353.36
Lincoln	46	13113	350.80
Park	79	22887	345.17
Washakie	23	6700	343.28
Fremont	96	30015	319.84
Converse	34	10674	318.53
Goshen	32	10366	308.70
Sheridan	69	23250	296.77
Uinta	45	15809	284.65
Wyoming	1185	423760	279.64
Sweetwater	82	30887	265.48
Albany	67	26843	249.60
Natrona	108	57611	187.46
Campbell	49	30244	162.02

Laramie	90	69756	129.02
---------	----	-------	--------

Question 10.

Based on Table 31, how does the number of liquor licenses per person in your community compare to the number of liquor licenses per person across the state? Is your rate bigger, smaller, or about the same? Discuss the differences.

Big Horn County has more liquor licenses per person then the state average. There are no more licenses available. We are in the upper half of the counties with our number of licenses. This may be in part because we are talking about nine communities; we have a very large county. This also includes part of the resorts on the Big Horn Mountain.

Compliance Check Failure Rate

The selling of alcohol to minors can contribute to the misuse of alcohol in your community. One measure of this is the failure of compliance checks by retail outlets. Consider the following table that has been ordered based on compliance check failure rate. Wyoming's rate has been included in Table 32 and is shaded as a point of comparison. Anything above this shaded line is higher than the state average and anything below this shaded line is lower than the state average.

Table 32. Percentage of Liquor License Holders That Failed a Compliance Check (Wyoming Association of Sheriffs and Chiefs of Police, 2006)

County	Number visited	Percentage
Carbon	16	37.50%
Hot Springs	16	37.50%
Platte	9	33.33%
Uinta	71	26.76%
Albany	65	26.15%
Goshen	38	23.68%
Teton	85	23.53%
Fremont	67	22.39%
Laramie	174	21.84%
Sweetwater	51	21.57%
Wyoming	1073	20.41%
Campbell	83	18.07%
Natrona	186	17.74%
Lincoln	69	14.49%
Converse	30	13.33%
Park	104	12.50%
Big Horn	9	0%
Crook	Did not conduct checks in 2006	
Johnson	Did not conduct checks in 2006	
Niobrara	Did not conduct checks in 2006	
Sheridan	Did not conduct checks in 2006	
Sublette	Did not conduct checks in 2006	
Washakie	Did not conduct checks in 2006	
Weston	Did not conduct checks in 2006	

Question 11.

Based on Table 32, how does your community's alcohol compliance failure rate compare to the alcohol compliance failure rate across the state? Is your rate bigger, smaller, or about the same? Discuss the differences.

This table caused a lot of discussion. We had law enforcement that claimed they never happened. Nine compliance checks might as well be zero when we have 33 licenses.

Percentage of Drive-up Liquor Windows

The percentage of drive-up liquor windows in your community can contribute to alcohol-related concerns because drive-up liquor windows make alcohol more easily obtainable and may encourage drinking and driving. This section will help you determine both the number of establishments with drive-up liquor windows and also what percentage of the liquor license holders in your community have them. The first step is to list all the liquor licenses by name in your community. A list of the liquor license holders can be obtained from the City Clerk's Office for establishments within municipalities and from the County Clerk's Office for establishments in unincorporated county areas. Compile these lists in Table 33 of this workbook, by recording the name of the establishment in the first column. Next, find out how many of these establishments have drive-up liquor windows and in the column headed drive-up liquor window write yes if there is a drive-up liquor window and no if there is not. You may already know if an establishment has a drive-up liquor window or not, in which case simply record a yes or a no immediately. Those establishments which are not known may require a visit or a phone call to determine whether or not they have a drive-up liquor window. Based on this research, calculate the percentage of establishments in your community that have a drive-up liquor window. This data must be collected and submitted to Dr. Rodney Wambeam at WYSAC (rodney@uwyo.edu) no later than April 30, 2007. Data for all 24 grantee communities will be compiled and returned to each grantee no later than May 15, 2007 in order for you to compare your results to the rest of the state.

Table 33. Drive-up Liquor Windows and Liquor Licenses in your Community

Establishment	Drive-up liquor window
Maverik Country Store	No
Lisa's Fine Food and Spirits	Yes
Branding Iron	Yes
Smoke House	No
Uptown Café	No
Dutchie's	No
Wagon Wheel	No
Ron's Food Farm	Yes
The Stockman's Bar and Lounge	Yes
The Elk's	No

The Eagles	No
Harper's Service Center	Yes
Burlington Bar	Yes
Byron Bar	Yes
C&R Liquors	Yes
4 Corners Bar	Yes
Frannie Bar	Yes
Oasis Bar	Yes
Water Hole #1	Yes
The Hideout	No
Dirty Annie's	No
Shell Creek Campground	No
The Highway Bar	Yes
Hyattville Bar	Yes
Manderson Bar	No
The Silver Spur	Yes
Deer Haven	No

Community drive-up liquor window percentage = __55.6%__

State drive-up liquor window percentage = __23.2%__

Question 12.

Based on Table 33, how does your community's drive-up liquor windows percentage compare to the drive-up liquor windows percentage across the state? Is your percentage bigger, smaller, or about the same? Discuss the differences.

Our percentage of drive-up liquor windows is more than double the states average. The only places that don't have drive-up windows is because where they are located there is no way to have a drive-up window.

Other Local Data

Feel free to consider and analyze other local data that will help you better understand how, and to what extent retail availability may influence alcohol-related problems in your community. For example, you may have data on the density of retail outlets, or anecdotal data on specific outlets that are known for selling to minors, or intoxicated persons. You may

also want to consider local laws surrounding retail availability. If you have other local data describe the results here.

Retail Availability Questions

Question 13.

Based on information gathered about liquor licenses per 100,000 population 14 years and older, alcohol compliance check failure rates, drive-up liquor window percentage, and other local data, what are the concerns around retail availability that might contribute to the misuse of alcohol and its consequences in your community? Justify your decision.

Drive-up windows make it easier for people to drink “in secret.” We live in predominately Mormon communities where drinking is forbidden. Drinking of alcohol is done in private or in seclusion where only certain individuals can see. Sitting in a public place and drinking is very frowned on.

The secretiveness surrounding alcohol drinking only adds to the mystic with our underage drinkers. There is also the mind set that adults are not suppose to drink, but if they do so behind closed doors it is somehow acceptable. We see the same thing with our youth, sneaking alcohol is acceptable – just don’t get caught. One also must realize that Mormon youth are really risking a lot when they drink, because if they get caught they not only have to deal with the legal ramifications, but they must deal with the church also. Because of this, there is a lot of covering situations up.

We have a lot of people pulling up to windows to begin or continue drinking. The new open container law will hopefully deter some of this. Compliance checks are felt to be a joke here at best.

Question 14.

Based on the above considerations, to what degree does your CAC believe retail availability is impacting the misuse of alcohol and its consequences in your community? Justify your decision.

(place an “x” next to a number from 0 to 10)

No impact						Major impact					
0	1	2	3	X4	5	6	7	8	9	10	

Criminal Justice

The next causal area researched in this needs assessment has to do with the criminal justice system. Again, this will mean some original research and the submission of data to WYSAC for state level analysis.

Conviction Rates

To understand how the criminal justice system in your community addresses the misuse of alcohol in your community, you will need to visit the clerk of court for all circuit courts in your community. Each clerk should be able to provide you a listing of the 2006 convictions for the alcohol-related crimes listed below. You will need to fill in Table 34 and return to WYSAC a copy of the list provided by the clerk of circuit court. WYSAC will in turn use that information to provide you with the conviction rates across Wyoming for each of the different types of crimes.

Table 34. Percentage of Convictions for Alcohol-Related Crime within the Circuit Court

Alcohol-related Crime	# of Filings	# Found Guilty	Dismissed by Prosecution	Dismissed	Deferred	Not Guilty	Pending
Minor in Possession	25	24	0	1	0	0	0
Adult DUI (BAC>0.08)	49	41	2	0	3	0	3
Juvenile DUI (BAC > 0.02)	3	3	0	0	0	0	0
DUI to a degree	26	14	3	1	2	1	5
DWUI 2nd	17	16	0	0	0	0	1
Open Container	16	11	1	1	2	0	1
Other	11	11					
Total	147	120	6	3	7	1	10

- To obtain the percentage you will need to sum the number of filings, and also sum the number of guilty convictions. To obtain the percentage, simply divide the total number of guilty convictions in your county by the total number of filings, and then multiply by 100.

Community conviction percentage = 81.6%

State conviction percentage = 74.1%

After gathering data from each clerk of court submit a copy of the list and your completed Table 34 to Dr. Rodney Wambeam at WYSAC (rodney@uwyo.edu) no later than April 30, 2007. WYSAC researchers will calculate the conviction percentage statewide for comparison

to your own conviction percentage. Data for all 24 grantee communities will be returned to each grantee no later than May 15, 2007 in order for you to compare your results to the rest of the state.

Question 15.

Based on the data in Table 34, how does your community's conviction rate for alcohol-related crimes compare to the alcohol-related conviction rate across the state? Is your rate bigger, smaller, or about the same? Discuss the differences.

Our conviction rate is higher, but this question was another that caused a lot of discussion. As was referred to in the answer to question #5 we have a lot of community members who are not happy with the criminal justice system. We have a newly elected county attorney and the hope is that some things are going to change. There were MANY problems with the last county attorney that people felt it would be best to just leave alone since we have a new one. Our number of filings was the cause of concern.

Wyoming Alcohol Use Issues Survey 2006

In 2006, the Wyoming Department of Health Substance Abuse Division, the Wyoming Association of Sheriffs and Chiefs of Police, and the Wyoming Department of Transportation funded an alcohol opinion survey. Within that survey, participants were asked about how strongly they felt underage drinking laws should be enforced, and whether adults who provide alcohol to minors should be prosecuted. The results for each county are reproduced in Tables 35 and 36. Counties have been ranked according to how strongly they disagree or somewhat disagree with the enforcement of the laws

Table 35. Percentage of Survey Participants Who Agreed or Disagreed with the Statement: “Local Law Enforcement Should Strongly Enforce Laws Regulating Alcohol Use by Youth under Age 21” (Wyoming Alcohol Use Issues Survey 2006)

County	Somewhat or strongly agree	Neither agree nor disagree	Somewhat or strongly disagree
Hot Springs	93.2%	1.0%	5.9%
Converse	93.9%	0.5%	5.7%
Platte	92.5%	1.9%	5.7%

Fremont	94.9%	1.8%	3.2%
Hot Springs	96.6%	0.5%	3.0%
Goshen	95.5%	1.5%	3.0%
Sheridan	95.3%	2.4%	2.4%
Converse	94.7%	2.9%	2.4%
Big Horn	98.0%	0.5%	1.5%

Question 16.

Based on Tables 35 and 36, are there any concerns in your community regarding the use of alcohol by minors, or the supplying of alcohol to minors? Are your concerns bigger, smaller, or about the same? Discuss the differences.

This discussion caused laughter. It was hard, if not impossible to believe we had the highest percentage of people who agreed strongly with the two statements. The overwhelming comment was that there should have been the disclaimer “as long as it is not me or my child.” Parents providing alcohol here is common place and viewed as a noble thing to do. When law enforcement has taken a hard line they have been slaughtered in the letters to the editor. Experimenting with alcohol, as a minor, is normal and expected and how dare someone think otherwise. There are community members who want to see the attitude about alcohol consumption change, but whenever something is mentioned they feel they are in the minority and their voice is drowned out by “the other side.”

Out of Home Placements

Consider Table 37 that has been ordered based on the average rate per 100,000 population for the number of children in 2005 that were in out of home placements. Wyoming’s rate has been included in Table 37 and is shaded as a point of comparison. Anything above this shaded line is higher than the state average and anything below this shaded line is lower than the state average.

Table 37. Average Rate of out of Home Placements during 2005 (WYCAPS, 2005)

	Average Number	Population under 18	Rate per 100,000 population
Fremont	220.0	8,636	2547.476
Hot Springs	17.5	784	2232.143
Platte	33.5	1,766	1896.942
Carbon	53.75	3,083	1743.432
Goshen	42.5	2,561	1659.508
Converse	44.0	2,858	1539.538
Sweetwater	139.50	9,344	1492.937
Laramie	244.75	20,085	1218.571
Wyoming	1343.50	114,321	1175.2
Natrona	186.0	16,126	1153.417
Campbell	99.0	9,549	1036.758

Johnson	7.25	1,506	481.4077
Lincoln	16.0	3,969	403.1242
Teton	13.75	3,464	396.94
Big Horn	9.75	2,737	356.2294

Average Juvenile Probation Cases

Consider Table 38 that has been ordered based on the average number of juvenile probation cases (rate per 100,000 people) for 2005. Wyoming's rate has been included in Table 38 and is shaded as a point of comparison. Anything above this shaded line is higher than the state average and anything below this shaded line is lower than the state average.

Table 38. Average Rate of Juvenile Probation Cases during 2005 (WYCAPS, 2005)

	Average Number	Population under 18	Rate per 100,000 population
Hot Springs	13.67	784	1743.197
Platte	29.58	1,766	1675.16
Laramie	280.40	20,085	1396.046
Goshen	34.67	2,561	1353.638
Fremont	97.75	8,636	1131.89
Sheridan	64.25	5,686	1129.968
Teton	38.83	3,464	1121.055

Lincoln	28.0	3,969	705.4674
Big Horn	16.92	2,737	618.0733
Campbell	57.33	9,549	600.4119
Uinta	30.75	5,553	553.7547
Weston	5.25	1,249	420.3363
Johnson	4.92	1,506	326.4719
Niobrara	1.00	418	239.2344
Sublette	1.50	1,484	101.0782

Question 17.

Based on Tables 37 and 38, are there any concerns in your community regarding out of home placements and juvenile probation cases? Are your concerns bigger, smaller, or about the same? Discuss the differences.

Out of home placement is happening more often here, but with our family court in place here, they work hard to keep juveniles in the home. Our family and drug courts continue to grow and seem to be getting stronger. Law enforcement and the court system, at this time, appear to be giving their stamp of approval of them and how they are doing.

Key Law Enforcement Interviews

As part of this needs assessment you will need to conduct interviews of key law enforcement officers. You are encouraged to do at least one interview with the Chief of Police and one with the County Sheriff, but consider what interviews would be the most appropriate and informative for your community. You may also want to consider interviews with emergency room staff, school officials, or treatment facility administrators about their interactions with the justice system. A sample protocol for the law enforcement interviews and ideas on how to gather and analyze qualitative data from these interviews can be found in Appendix B.

Officers Assigned to Alcohol-Related Issues

During the interviews with key law enforcement personnel you need to find out how many officers are assigned directly to alcohol-related issues and crimes. Questions about this appear on the interview protocol in Appendix B. Submit the data to Dr. Rodney Wambeam at WYSAC (rodney@uwyo.edu) no later than April 30, 2007. Once again, the data will be used to create state averages for comparison. Data for all 24 grantee communities will be returned to each grantee no later than May 15, 2007 in order for you to compare your results to the rest of the state. Use these numbers to answer the next question.

Law Enforcement Officers Assigned to Alcohol-Related Issues and Crime (County) =
__0__

Law Enforcement Officers Assigned to Alcohol-Related Issues and Crime (State) = __0__

Question 18.

Based on your interviews with law enforcement officers and the number of officers in your community assigned specifically to alcohol-related issues, what efforts are your law enforcement agencies pursuing or not pursuing when it comes to the misuse of alcohol?

In the last two weeks the sheriff department dedicated one of their deputies exclusively to alcohol and drug related issues in Big Horn County. School District #2 has a school resource officer and the sheriff is diligently pursuing funding to put one in the other three school districts. It is felt that these officers being visible at after school functions will help curtail youth coming to the functions after drinking or trying to drink while attending them. All agencies expressed the desire to do compliance checks and to do them more effectively, but money and personnel will dictate if this will be possible. Greybull is still trying to get their feet under them and get officers hired. The town of Greybull has just passed a new ordinance that will allow officers to investigate a house party without a formal complaint being filed. This should be a great help to officers if they choose to use it. Law enforcement need more help or they feel they do, from the judicial side. There is a lot of finger pointing going on and we tried to be careful and to not pursue things too far and be the cause of any more.

Other Local Data

Feel free to consider and analyze other local data that will help you better understand how, and to what extent criminal justice issues in your community may contribute to the misuse of alcohol and its consequences in your community. For example, you may have information on unique policies or strong enforcement of underage drinking laws in your community, or specific laws relating to your community. You may be able to assess information from your local drug courts, if you have one. If you have other local data describe the results here.

Criminal Justice Questions

Question 19.

Based on information gathered from alcohol conviction rates, alcohol use issues survey, out of home placements, juvenile probation cases, key law enforcement interviews, officers assigned to alcohol-related issues, and other local data, what are the concerns around criminal justice that might contribute to the misuse of alcohol and its consequences in your community? Justify your decision.

There seems to be lots of people thinking that someone else should be doing something different. From a third party perspective, everyone hopes they are doing the “right” thing, but everyone’s definition of that is different. Drugs are the main focus at this time and alcohol doesn’t appear to be a concern. That problem has been here a long time and there is only so much that can be done about it. There is a frustration with parents and how they either don’t want to parent or they want someone else to raise their kids. Law enforcement feels overwhelmed and frustrated by the courts. The courts are working at doing what is best for the kids and families they deal with. We would all benefit if we could all get on the same page, but after our conversations I think that will be quite a challenge.

Question 20.

Based on the considerations in Question 19, to what degree does your CAC believe the concerns around criminal justice are contributing to the misuse of alcohol and its consequences in your community? Justify your decision.
(place an “x” next to a number from 0 to 10)

No impact								Major impact	
0	1	2	3	4	5	6	7	X8	9 10

Social Availability

Social availability includes the obtaining of alcohol from friends, associates, and family members, but it also refers to the availability of alcohol gatherings such as parties and other social events where the alcohol is provided as part of the event.

Prevention Needs Assessment

The 2006 Prevention Needs Assessment (PNA) asked youth where they obtained and consumed their alcohol in some very specific questions. This data provides a starting point for understanding the social availability of alcohol for youth.

Complete Tables 39 and 40 below using the data from the 2006 PNA, available in Appendix D of this workbook. For smaller counties it may be appropriate to only consider 6th through 12th grades combined because those estimates tend to be more stable.

Table 39. Percentage of Students Obtaining Their Last Drink of Alcohol from Six Different Sources (2006 PNA)

Grade	Parent(s)	Parent of a Friend	Adult 21 or over	Someone under 21	Took It	Licensed Retailer
County 6 th Grade	63.9%	7.3%	14.2%	3.6%	10.9%	0.0%
Wyoming 6 th Grade	54.4%	7.2%	13.9%	11.0%	12.3%	1.2%
County 8 th Grade	29.2%	21.8%	21.4%	11.8%	15.8%	0.0%
Wyoming 8 th Grade	33.7%	9.7%	20.6%	20.0%	14.5%	1.5%
County 10 th Grade	16.2%	8.0%	46.0%	23.3%	5.3%	1.2%
Wyoming 10 th Grade	18.7%	8.2%	36.8%	26.9%	7.2%	2.2%
County 12 th Grade	6.1%	30.1%	55.2%	24.0%	2.8%	8.8%
Wyoming 12 th Grade	12.0%	4.5%	52.0%	22.6%	3.1%	5.9%
County 6 th - 12 th Grade	20.2%	9.4%	40.5%	18.9%	7.4%	3.6%
Wyoming 6 th - 12 th Grade	26.6%	7.6%	32.8%	21.3%	8.9%	2.8%

Table 40. Percentage of Students Who Attended a Gathering with Large Amounts of Available Alcohol (2006 PNA)

Grade	County	Wyoming
6 th Grade	17%	19.5%
8 th Grade	30.1%	32.3%
10 th Grade	38.6%	48.5%
12 th Grade	59%	62.2%
6 th – 12 th Grade	36.8%	37.3%

Question 21.

Based on Tables 39 and 40, where are youth in your community getting their alcohol, and are they attending gatherings with large amounts of alcohol available? How do these rates compare to the rates across the state? Is your community higher, lower, or about the same? Discuss the differences.

We are pretty even with the state percentages, with the exception of our 8thgraders getting alcohol from a friends parent, we more then doubled the state percentage. There was no explanation why we were so much higher on that group. When you look at the numbers, it leaves one to theorize why the stats change like they do. What we came up with is younger students found access to alcohol from adults as their options to get it other ways were fewer. As a student got older more options become available. For one thing a student may look older and be able to get served themselves and share it with their friends. Also, having older friends is an advantage and more likely as one gets older. Stealing it may be the only way to obtain alcohol when you are in 6th grade, but once again as one gets older, it appears that option becomes less likely. Our students are close to the state average on attending gatherings where alcohol is present. That is a common occurrence in the state of Wyoming. Adults seem to think there is nothing wrong with going to beer garden and taking their children with them. Rodeos are a family event, with alcohol readily available. Parents here can't seem to wait for their teenagers to get a drivers license so they can be at these events, drink and have nothing to worry about because their child can drive them home.

Wyoming Alcohol Use Issues Survey 2006

In 2006, the Wyoming Department of Health Substance Abuse Division, the Wyoming Association of Sheriffs and Chiefs of Police, and the Wyoming Department of Transportation funded an alcohol opinion survey. Within that survey, the question that was specific to social availability is, "Whether or not you are a parent, at what age would you allow your child to first drink alcohol other than a few sips?" The results for each county are reproduced in Table 41.

Table 41. Percentage of Adult Respondents Who Would Allow Their Child to First Drink Alcohol by Age Category (2006 Alcohol Use Issues Survey)

County	15 or younger	16 to 17	18 to 20	21 and over	Never	Total for under 21
Teton	2.9%	9.3%	38.6%	46.4%	2.9%	50.8%
Carbon	3.1%	9.8%	32.6%	51.8%	2.6%	45.5%
Johnson	2.1%	7.9%	35.1%	53.4%	1.6%	45.1%
Sublette	0.0%	6.4%	36.2%	54.8%	2.7%	42.6%
Weston	2.5%	6.4%	28.1%	61.1%	2.0%	37.0%
Sweetwater	2.7%	6.0%	27.3%	60.1%	3.8%	36.0%
Sheridan	1.5%	8.0%	26.4%	60.2%	4.0%	35.9%
Platte	2.4%	4.8%	28.4%	61.5%	2.9%	35.6%
Albany	2.5%	4.5%	27.7%	61.4%	4.0%	34.7%

Natrona	0.5%	7.3%	26.7%	63.9%	1.6%	34.5%
Wyoming	2.2%	5.6%	26.7%	62.2%	3.3%	34.5%
Laramie	3.4%	2.5%	28.3%	64.6%	1.3%	34.2%
Converse	1.5%	6.5%	25.4%	61.7%	5.0%	33.4%
Campbell	4.0%	5.4%	23.3%	64.4%	3.0%	32.7%
Goshen	1.6%	8.8%	21.2%	64.8%	3.6%	31.6%
Hot Springs	4.5%	5.0%	22.1%	65.3%	3.0%	31.6%
Park	2.1%	5.7%	22.9%	66.7%	2.6%	30.7%
Uinta	3.3%	2.8%	24.2%	58.3%	11.4%	30.3%
Crook	1.6%	5.3%	23.3%	65.1%	4.8%	30.2%
Fremont	0.5%	5.3%	23.9%	67.5%	2.9%	29.7%
Lincoln	1.0%	4.2%	23.4%	61.5%	9.9%	28.6%
Niobrara	3.4%	3.4%	21.8%	65.0%	6.3%	28.6%
Washakie	1.0%	5.2%	20.8%	65.6%	7.3%	27.0%
Big Horn	3.5%	3.5%	19.7%	68.7%	4.5%	26.7%

Counties in Table 32 are ranked based on the total percentage of adults who would allow a child under 21 to first drink alcohol.

Question 22.

Based on Table 41, how do adult attitudes toward allowing minors to drink alcohol compare to the rest of the state? Is your community higher, lower, or about the same? Discuss the differences.

According to table 41 parents in Big Horn County are the least likely in the state to allow their underage child to have alcohol. That was sure a surprise to all of us! The 18 – 20 year old group was the biggest surprise as there are quite a few adults that feel the legal age should be 18 years old. The validity of the survey was definitely questioned or the honesty of the participants.

Town Hall Meeting

As part of the town meeting that you will hold for this needs assessment you will be discussing the social availability of alcohol in your community. In particular you will be discussing how youth and adults in Wyoming obtain and consume alcohol. You will also be discussing to what degree the community members feel that social availability contributes to the misuse of alcohol in your community. A sample protocol for the town hall meeting and ideas on how to gather and analyze qualitative data from this meeting can be found in Appendix C.

Other Local Data

Feel free to consider and analyze other local data that will help you better understand how and to what extent social availability may influence alcohol-related problems in your community. For example, you may have data from your college campus or local police department on parties where alcohol is freely available. If you have other local data describe the results here.

One thing we know for sure is that Big Horn County has a problem with house parties put on by 18-25 year olds and those attending may be as young as middle school. These parties have been hard to prosecute because no one wanted to be the one making the formal complaint and law enforcement could do nothing without the complaint. Law enforcement would rather everyone gets home safe rather than prosecute anyway.

Social Availability Questions

Question 23.

Based on information gathered from the PNA, and the 2006 Alcohol Use Issues Survey, your town hall meeting, and other local data, what are the concerns around social availability that might contribute to the misuse of alcohol and its consequences in your community? Justify your decision.

Social availability was a big concern at the town meetings. Adults don't seem to understand the consequences of underage drinking. Underage drinking is a rite of passage, one we don't like, but is to be expected and tolerated. For some of these families it is a life style. In Big Horn County it is interesting when one talks to people on the north end compared to the south end. On the north end everything is kept quiet and is dealt with through the church. On the south end the "good ole' boy" system comes in to play and the attitude of "kids will be kids". More then once the comment was made, well at least they aren't doing drugs or aren't on crack. The drug problem here is perceived to be much greater then the alcohol problem. One thought was - alcohol is legal for adults, is that the difference?

Question 24.

Based on these considerations, to what degree does your CAC believe social availability is impacting the misuse of alcohol and its consequences for your community? Justify your decision.

(place an "x" next to a number from 0 to 10)

No impact						Major impact				
0	1	2	3	4	5	6	X7	8	9	10

Promotion

Promotion refers to attempts by alcohol retailers and industry to increase demand through the marketing of their products. Once again, this will require some original data collection to acquire a sense of the depth of marketing surrounding alcohol in your community, and you will need to send some of your results to WYSAC to create comparisons among all 24 PF funded communities.

Sponsorships

List all the major community events and festivals in your community between March 2006 and February 2007, under the heading Community Event or Festival in Table 42. Next find out how many of these events or festivals had alcohol-related sponsors and in the column headed alcohol-related sponsorship write the sponsors name(s) if there is an alcohol-related sponsorship and no if there is not. For example, Pendleton Whisky is the official sponsor of the hospitality tent at Cheyenne Frontier Days; Jubilee Days in Laramie features beer tents throughout downtown. Calculate the percentage of festivals and events in your community that had alcohol-related sponsorships. This data must be collected and submitted to Dr. Rodney Wambeam at WYSAC (rodney@uwyo.edu) no later than April 30, 2007. Data for all 24 grantee communities will be compiled and returned to each grantee no later than May 15, 2007 in order for you to compare your results to the rest of the state.

Table 42. Community Events and Festivals and Their Alcohol-Related Sponsors

Community Event or Festival	Dates	Alcohol-Related Sponsorship
Big Horn County Fair	8/2006	No
Day's of '49	6/2006	No
Lilac Day's	6/2006	No
Mustang Days	7/2006	No
Homesteader Days	7/2006	No
Cowley Pioneer Days	7/2006	No
Bob Good Memorial Rodeo	9/2006	No
Greybull Centennial Celebration	7/2006	No
Burlington Days	7/2006	No
Old Timer's	7/2006	No

Community alcohol-related sponsorship percentage = 0%

State alcohol-related sponsorship percentage = 24.5%

Advertising

Advertising in America and Wyoming has become ubiquitous. To gain a better sense of the magnitude of alcohol advertising in your community you are going to follow a specific research protocol to gather data on alcohol marketing in a sample of local newspapers and on billboards across your community. This data must be collected following the protocol described below and submitted to Dr. Rodney Wambeam at WYSAC (rodney@uwyo.edu) no later than April 30, 2007. Data for all 24 grantee communities will be compiled and returned to each grantee no later than May 15, 2007, in order for you to compare your results to the rest of the state.

Step One

The first measure of alcohol advertising in your community will be to count all the billboards in your county. To do so, you will need to drive all the U.S. and State highways and interstates in your community. In addition you will need to drive all the business districts in your community's towns and cities. Using a map, mark the location of each billboard you encounter. A billboard that advertises alcohol, alcohol sales, or alcohol establishments should be marked with a red mark, whereas a billboard that does not advertise alcohol should be marked with a green mark. Each billboard sign should only receive one mark per advertisement presented on that billboard. If a billboard is visible from more than one road, highway or interstate, then it should only be counted once.

After marking the map with all the billboards in your community, record both the number of billboards advertising alcohol and the number of billboards not advertising alcohol. To calculate the percent of billboards which advertise alcohol in your community, simply divide the number of alcohol-related billboards by the total number of billboards. This is a snapshot of billboard advertisements on roads and highways across your community. Return your community's percentage of alcohol-related billboards to WYSAC by April 30, 2007.

Number of billboards advertising alcohol = _____ 0 _____

Number of billboards not advertising alcohol = _____ 7 _____

Percentage of billboards advertising alcohol = _____ 0.0% _____

State percentage = _____ 7.3% _____

Step Two

In this next step there will be two concurrent parts. The first part will involve counting the number of alcohol advertisements in your local newspaper(s). The second part will involve counting the number of alcohol advertisements that specifically market promotional events that encourage the increased use of alcohol. The basic methodology you follow is the same for both parts.

To measure the number of alcohol advertisements you will need to look at copies of the major local newspapers in your community at four specific time points during the past year. Going in reverse chronological order, you will need to examine all the papers for the following time periods:

- March 25, 2007 to March 31, 2007
- December 24, 2006 to December 30, 2006
- September 10, 2006 to September 16, 2006
- July 2, 2006 to July 8, 2006

The data collection will capture information about two holiday periods and two non-holiday periods. Data collection from March 25, 2007 to March 31, 2007 should use the newspapers issues as they are released. Back issues used for the December, September and July data collection periods should be archived and available either from the local library or local newspaper supplier.

Note, you will need to examine all issues of the newspaper during the identified time periods. For instance, if your major newspaper only appears once per week you would only count that single day. If the newspaper is biweekly, then you will examine the two issues in the week. If the newspaper is daily, then you will examine all seven issues in the week. If your newspaper only appears once per month, count the ads that appear in that single monthly issue regardless of which week it appears.

The reason for this data collection is to better understand exposure to alcohol marketing. As a result, a newspaper that appears only once a week provides less exposure than one that appears every day.

When examining the newspapers, please count all advertisements for alcohol brands, alcohol distributors, liquor stores, bars, and saloons. You will also need to count restaurant advertisements that mention alcohol or bar service. You should look at both the regular print advertisements and the classifieds in your search.

As you count the alcohol advertisements, also note the number of advertisements that market promotional events encouraging the increased use of alcohol. To be more exact, count the number of advertisements for events like “ladies’ night,” “happy hour,” unlimited drinking for a fixed price or over fixed time period, free or reduced priced drinks with a coupon, or “2-for-1 night,” that encourages people to over-consume alcohol in retail establishments.

The following example illustrates how the data collection should be done in a week. Albany County members would look at issues of the Laramie Daily Boomerang for March 25 to 31. This time period includes papers for March 25, 27, 28, 29, 30 and 31 because there is no paper printed on March 26. Similarly, Albany county members also examine the local college newspaper called the Branding Iron, which is published on March 27, 28, 29 and 30. A count from the Daily Boomerang newspapers of that time period might find four ads on Sunday, zero on Monday because there is no newspaper, four on Tuesday, four on Wednesday, eight

on Thursday, ten on Friday, and six on Saturday for a total of 36 alcohol advertisements during the week of March 25, 2007. A count from the Branding Iron may produce two ads on Tuesday, 5 ads on Wednesday, four ads on Thursday, and three ads on Friday for a total of 14 alcohol advertisements during the week of March 25, 2007. When these two papers are combined there are 50 alcohol advertisements. Of these 50 alcohol advertisements, 20 of them may be advertisements for free drinks, dollar drinks, and happy hours etc.

After counting the number of advertisements and special promotions in all your local news papers, complete Table 43 below and send to Dr. Rodney Wambeam at WYSAC (rodney@uwyo.edu) WYSAC no later than April 30, 2007. WYSAC will compile your results with the other grantees data and return a state average and grantee comparison chart to you by May 15, 2007.

Table 43. Local Alcohol Advertisements and Promotional Events, March 2006 to February 2007

Name of Paper	Frequency of Paper	Time Period	Total Number of Alcohol Advertisements in Local Newspaper	Total Number of Promotional Event Advertisements in Local Newspaper
Greybull Standard	Once a week	March 25, 2007 to March 31, 2007	0	2
Basin Republican Rustle	Once a week	December 24, 2006 to December 30, 2006	1	0
		September 10, 2006 to September 16, 2006	0	0
Lovell Chronicle	Once a week	July 2, 2006 to July 8, 2006	0	0
		March 25, 2007 to March 31, 2007		
		December 24, 2006 to December 30, 2006		
		September 10, 2006 to September 16, 2006		
		July 2, 2006 to July 8, 2006		

Community average = __1.9%__

State average = __Weekly average for promotional ads 3.0%
Weekly average for alcohol total ads 11.5%__

Question 25.

Based upon the newspaper data you collected above and the statewide analysis sent back to you by WYSAC, how does the magnitude of alcohol advertising in your community compare to that across the state. Is your alcohol advertising smaller, greater, or about the same as other alcohol advertising across the state? Discuss the differences.

Our three newspapers are way below the Wyoming average. There is very rarely alcohol advertising, occasionally for an event or holiday. Part of that is the religious community we live in. We don't talk about it, discuss it, or God forbid advertise it, we just quietly drink it and pretend that no one does. For some events there are alcohol signs on businesses, these are justified as a "free" sign for something else.

Other Local Data

Feel free to consider and analyze other local data that will help you better understand how and to what extent the promotion of alcohol in your community may influence alcohol-related problems in your community. For example, you may have information on alcohol advertising in or on liquor stores, convenient stores etc, or flyers passed out around town or other ways that alcohol might be promoted on college campuses, or at schools. If you have other local data describe the results here.

Promotion Questions

Question 26.

Based on information gathered from alcohol sponsorship of events, billboards, newspaper advertisements, and other local data, what are the concerns around promotion that might contribute to the misuse of alcohol and its consequences in your community? Is your alcohol advertising smaller, greater, or about the same as other alcohol advertising across the state? Justify your decision.

Our advertng is less then the rest of the state. It is felt that local advertising is not greatly affecting the misuse of alcohol in our community.

Question 27.

Based on these considerations, to what degree does your CAC believe promotion is influencing the misuse of alcohol and its consequences in your community? Justify your decision.

(place an "x" next to a number from 0 to 10)

No impact						Major impact					
0	1	X2	3	4	5	6	7	8	9	10	

Community Norms

Community norms refer to the acceptability or unacceptability of certain behaviors in a community, and it is the one causal factor that most often overlaps with other factors. In this section you will mostly gather data around community events. However, be aware that issues like social availability and law enforcement also reflect community norms.

Prevention Needs Assessment

There are three questions from the 2006 PNA that ask about attendance at events where alcohol was being sold, adults were drinking alcohol, or adults were drunk. Complete Table 44 below using data provided in Appendix D, Tables K, L, and M in this workbook.

Table 44. Percentage of Students Who Attended Community Events Where Alcohol Was Sold, Adults Were Drinking, or Adults Were Drunk by Grade (2006 PNA)

Grade	Alcohol was Sold	Adults were Drinking	Adults were Drunk
County 6 th grade	33.6%	46%	33.6%
Wyoming 6 th grade	41.1%	54.3%	22.6%
County 8 th grade	44.1%	51%	44.1%
Wyoming 8 th grade	57.0%	65.7%	43.9%
County 10 th grade	56.9%	64.7%	56.9%
Wyoming 10 th grade	65.9%	72.3%	57.7%
County 12 th grade	62.6%	71.1%	62.6%
Wyoming 12 th grade	70.8%	74.9%	64.7%
County 6 th - 12 th grade	49.8%	58.6%	49.8%
Wyoming 6 th - 12 th grade	56.7%	65.5%	44.5%

Question 28.

Based on PNA data in Table 44, how does your community compare to the rest of the state when it comes to students attending events where alcohol is sold, adults are drinking, or adults are drunk? Are your problems smaller, greater, or about the same as across the state? Discuss the differences.

Our percentages are less for alcohol being sold or adults drinking, but then we jump ahead when we get to adults being drunk. Getting drunk is a part of drinking here, hence the binge drinking percentages. It is common here for parents to take their children to a restaurant and allow them to drink alcohol. It is legal and they are quick to point that out. Being around someone drunk is considered a “hilarious” experience and one kids love to go to school and talk about.

Wyoming Alcohol Use Issues Survey 2006

Once again, data from the Alcohol Use Issues Survey are of use in this needs assessment. Specific to community norms are the statements, “Alcohol should not be sold at community events, such as fairs, sporting events, parades, and rodeos,” and “In your opinion is drinking and driving in your community...”

Counties are ranked in Table 45 based upon how much they disagree with the statement “Alcohol should not be sold at community events, such as fairs, sporting events, parades, and rodeos.” The higher the level of disagreement the greater the community norm to serve alcohol at community events. Counties are ranked in Table 46 based on how much they feel drinking and driving is a serious or somewhat serious problem in their community. In order to compare individual counties to Wyoming as a whole, Wyoming has been included in the tables and is shaded. Anything above this shaded line is higher than the state average and anything below this shaded line is lower than the state average.

Table 45. Percentage of Agreement or Disagreement to the Statement “Alcohol Should Not be Sold at Community Events, Such as Fairs, Sporting Events, Parades, and Rodeos” (Wyoming Alcohol Use Issues Survey, 2006)

County	Somewhat or strongly disagree	Neither agree nor disagree	Somewhat or strongly agree
Teton	66.0%	4.7%	29.4%
Sublette	57.9%	4.6%	37.4%
Albany	53.2%	6.4%	40.3%
Sheridan	52.3%	7.1%	40.5%
Carbon	51.6%	8.1%	40.5%
Johnson	51.6%	7.2%	41.2%
Crook	46.7%	6.2%	47.2%
Park	46.6%	9.3%	44.0%

Wyoming	45.7%	8.4%	45.9%
Uinta	45.6%	6.0%	48.4%
Sweetwater	45.5%	8.4%	46.0%
Hot Springs	45.3%	6.0%	48.7%
Campbell	43.6%	8.9%	47.5%
Natrona	43.6%	10.8%	45.7%
Converse	43.5%	7.7%	48.8%

Laramie	42.8%	9.2%	47.9%
Fremont	41.5%	9.1%	49.3%
Washakie	40.9%	6.1%	53.1%
Big Horn	40.2%	8.5%	51.3%
Weston	39.6%	6.1%	54.3%
Lincoln	37.4%	8.1%	54.6%
Niobrara	34.1%	6.6%	59.2%
Goshen	33.7%	10.6%	55.8%

Table 46. In Your Opinion, is Drinking and Driving in Your Community a... (Wyoming Alcohol Use Issues Survey, 2006)

County	Not a problem at all	Not a serious problem	A serious problem/A somewhat serious problem
Sweetwater	1.1%	5.3%	93.7%
Fremont	0.9%	7.0%	92.1%
Laramie	4.2%	5.5%	90.3%
Campbell	2.0%	9.5%	88.6%
Natrona	2.6%	8.2%	89.2%
Albany	2.0%	9.1%	88.9%
Teton	2.7%	8.8%	88.5%
Sheridan	3.4%	8.8%	87.8%
Wyoming	2.9%	10.4%	86.8%
Sublette	2.6%	10.9%	86.5%
Goshen	4.1%	11.3%	84.6%
Platte	4.4%	11.3%	84.2%
Washakie	3.6%	13.0%	83.4%
Converse	1.5%	15.5%	83.0%
Hot Springs	3.0%	14.0%	83.0%
Uinta	2.4%	16.7%	80.9%
Park	3.1%	17.3%	79.5%
Carbon	3.7%	16.8%	79.4%
Niobrara	4.0%	17.3%	78.7%
Crook	3.2%	20.1%	76.7%
Johnson	3.7%	19.8%	76.4%
Big Horn	4.7%	19.2%	76.2%
Weston	3.4%	21.7%	74.8%
Lincoln	4.3%	22.6%	73.1%

Question 29.

Based on Table 45, how do attitudes toward selling alcohol at community events in your community compare to attitudes toward serving alcohol at community events across the state?

The majority of those surveyed in Big Horn County feel that alcohol should not be sold at community events. Our county is the 5th strongest in their reply. The 40.2% that think it should be sold would probably just bring their own.

Question 30.

Based on Table 46, how do attitudes toward drinking and driving in your community compare to attitudes toward drinking and driving across the state?

We are third in our opinion of drinking and driving. We don't believe drinking and driving is a serious problem in our community.

Special Alcohol Permits for Community Events

Another way to understand community norms around alcohol use is through the number of alcohol permits distributed for community events. Table 47 shows the combined number of both special event permits and malt beverage permits per 100,000 population of those 14 years and older. These types of permits cover most sales of alcohol at fairs, rodeos, and other special events. The population of those 14 years and older is used to be consistent with research done by the National Institute on Alcohol Abuse and Alcoholism regarding sales per gallon of ethanol (National Institute on Alcohol Abuse and Alcoholism, 2006.)

Table 47. Number of Special Event and Malt Beverage Liquor License per 100,000 Population Aged Fourteen Years and Older (2005 Wyoming Department of Revenue)

County	Liquor Licenses	Population	Rate per 100,000 population
Teton	21	16396	128.08
Crook	6	5268	113.90
Sublette	4	5851	68.36
Big Horn	6	9339	64.25
Carbon	8	13006	61.51
Johnson	2	6644	30.10
Converse	3	10674	28.11

Hot Springs	1	3987	25.08
Wyoming	83	423760	19.59
Sweetwater	6	30887	19.43
Park	4	22887	17.48
Weston	1	5771	17.33
Lincoln	2	13113	15.25
Platte	1	7352	13.60
Fremont	4	30015	13.33
Albany	3	26843	11.18
Natrona	5	57611	8.68
Sheridan	2	23250	8.60
Uinta	1	15809	6.33
Laramie	3	69756	4.30
Campbell	0	30244	0
Goshen	0	10366	0
Niobrara	0	1991	0
Washakie	0	6700	0

Question 31.

Based on Table 47, how does your community's rate of special event and malt liquor licenses compare to the rest of the state? Is it higher, lower or about the same? Discuss the differences.

Big Horn County is 4th in its number of alcohol permits. This number would be higher, but for a lot of special events a permit from a liquor establishment is used as they are the ones that buy the alcohol that is sold. Every event has alcohol sold at it or bringing your own is allowed – in the south end. In the north end, alcohol free events do take place.

Town Hall Meeting

As part of this needs assessment you will need to conduct a town hall meeting, and in that meeting you will need to find out about the general attitudes in your community around alcohol and a description of the alcohol culture in your community. Information gathered from this town hall meeting will be used to answer Question 32 below. A sample protocol for the town hall meeting and ideas on how to gather and analyze qualitative data from this meeting can be found in Appendix C.

Other Local Data

Feel free to consider and analyze other local data that will help you better understand how, and to what extent community norms may influence alcohol-related problems in your community. For example, you may have completed earlier focus groups or surveys of youth, parents, school personnel, or community members. If you have other local data describe the results here.

Community Norms Questions

Question 32.

Based on information gathered from the PNA, the Wyoming Alcohol Use Issues Survey 2006, special alcohol permits for community events, town hall meetings, and other local data, what are the concerns around community norms that might contribute to the misuse of alcohol and its consequences in your community? Justify your decision.

The biggest concern is how acceptable adult intoxication is around kids. There are also the mixed feelings or information that we should limit availability, we have 49.8% of our kids around drunken adults, but we don't have an issue with driving while intoxicated. The town hall meetings indicated that alcohol consumption and public intoxication was indeed a concern and was much too acceptable or excused by the community. A bad example is being set for our youth and we act like there is nothing that can be done about it.

Question 33.

Based on these considerations, to what degree does your CAC believe community norms are impacting the misuse of alcohol and its consequences in your community? Justify your decision.

(place an "x" next to a number from 0 to 10)

No impact								Major impact		
0	1	2	3	4	5	6	7	X8	9	10

Individual Factors

Individual factors that can influence the misuse of alcohol include biological factors, socioeconomic factors, and individual attitudes, beliefs and perceptions around alcohol use and drug use. Since little can be done to change biological predisposition, the primary focus of this last contributing factor will focus on individual attitudes, along with unique characteristics in your community that may influence the misuse of alcohol.

Prevention Needs Assessment

Often evidence-based prevention efforts target specific individual level factors that influence alcohol-related problems. In Wyoming, the major way these are measured is through risk and protective factors on the PNA. One of the best ways to interpret the PNA results is to look at which risk and protective factors are the best predictors of substance use. In preparation of

this workbook, WYSAC used statistical modeling at the state level to identify the PNA risk and protective factors that best predict 30-day alcohol use across the state. Based on the statistical models that were developed, WYSAC has provided in Appendix D of this workbook the percentage of students in your community who are at high, medium and low risk for substance use based on the identified combination of risk and protective factors. You will also use your county's PNA report to list the risk and protective factor prevalence rates which are most predictive of 30-day alcohol use.

Using the risk tables in Appendix D of this workbook complete Table 48 on the next page. Fill in the percentage of students in the 6th, 8th, 10th, and 12th grades who are at high, medium and low risk for 30-day alcohol use. If the percentage of high risk students in your community is larger than the state, this suggests that the individual factors may play a larger role in the misuse of alcohol by youth in your community. If the percentage of low risk students is higher than the state's rates, then individual factors may play a lesser role in the misuse of alcohol by youth in your community. In other words, the higher the percentage of students who are considered high-risk, the more you may consider these individual factors as impacting 30-day use of alcohol in your community.

After completing Table 48, you will need to use your county's PNA report to list the risk and protective factor prevalence rates for the identified attitudes, beliefs, and perceptions that predict 30-day alcohol use. As was done in previous prevention projects, the factors with the highest prevalence rates will be considered the most influential, because they affect the greatest number of students. Throughout this process of interpreting the individual factors measured on the PNA, Eric Canen will be available to answer questions and help in the interpretation. You may contact Eric by email at ecanen@uwyo.edu or by phone on (307) 760-0307.

Table 48. Percentage of Youth at Low, Medium, and High Risk Based upon the Combination of Predictive Factors (2006 PNA)

Grade	Level of risk	Percentage of students at each level of risk for the county	Percentage of students at each level of risk for Wyoming
6 th Grade	High	0.7%	1.2%
	Medium	3%	2.7%
	Low	96.3%	96.1%
8 th Grade	High	12%	14.9%
	Medium	15.8%	15.8%
	Low	72.2%	69.2%
10 th Grade	High	20.9%	27.4%
	Medium	18.6%	22.3%
	Low	60.5%	50.3%
12 th Grade	High	27.1%	30.9%
	Medium	18.7%	23.9%
	Low	54.2%	45.3%

Table 49. Risk and Protective Factors That Best Predict 30-Day Alcohol Use and Percentage of Students at Risk or Protected by Grade Level (2006 PNA)

Grade	Factors that best predict 30-day alcohol use	Percent of students at high risk or at low protection on predictive factors	
		State	Local
6 th Grade	Favorable Attitudes toward Drug Use	19.5%	19.4%
	Intent to Use Drugs	13.8%	10.6%
	Friends Use of Drugs	27.0%	23.6%
	Sensation Seeking	56.4%	52.8%
	Perceived Availability of Drugs	34.9%	34.3%
	Parents Favorable Attitude toward Drug Use	16.7%	18.8%
	Community Disorganization	34.7%	36.2%
	Social Skills*	28.7%	18%
8 th Grade	Favorable Attitudes toward Drug Use	29.9%	24%
	Intent to Use Drugs	20.8%	17.9%
	Friends Use of Drugs	45.1%	39.7%
	Interaction with Antisocial Peers	49.5%	46%
	Sensation Seeking	53.2%	55.8%
	Parents Favorable Attitude toward Drug Use	32.4%	31.6%
	Social Skills*	39.1%	26%
10 th Grade	Intent to Use Drugs	25.7%	19.4%
	Friends Use of Drugs	45.2%	32.3%
	Sensation Seeking	51.9%	53.9%
	Parents Favorable Attitude toward Drug Use	46.7%	40.3%
	Social Skills*	44.2%	40%
12 th Grade	Favorable Attitudes toward Drug Use	35.1%	26.9%
	Favorable Attitudes toward Antisocial Behavior	44.6%	47.2%
	Intent to Use Drugs	28.7%	19.7%
	Sensation Seeking	52.9%	65.9%
	Parents Favorable Attitude toward Drug Use	60.8%	54.1%
	Social Skills*	33.3%	34%
	Family Opportunities for Prosocial Involvement*	35.1%	36.5%

* List the percent of Students who are “at-low-protection” by completing the following formula:

$$L = 100 - x$$

where L is the percentage of students at-low-protection

and x is the protective factor prevalence rate listed in your community PNA report.

Question 34.

Based on data in Table 48, how does your level of risk based on the combination of risk and protective factors compare to the risk levels for the State of Wyoming? Is your percentage of students at high risk of alcohol use bigger, smaller, or about the same as the state? Discuss the differences.

Our risk and protective factors when compared to the states seem to indicate that our students are at low risk. Our high risk number increase and almost evens out with the states by 12th grade. Being in small communities may protect our younger students from some of the risks other students face in bigger communities.

Question 35.

Based upon discussions with the 2006 PNA researchers and the data in Table 49, which of the risk factors listed there have the highest prevalence rates for your community?

In 6th grade it is sensation seeking and we are higher then the state average in community disorganition. In 8th grade sensation seeking is the highest and is higher then the state percentage. In 10th grade sensation seeking is the highest and is also higher then the states percentage. 12th grade continues the trend with sensation seeking being the top risk factor and being higher then the states percentage. We were also higher then the state in favorable attitudes towards antisocial behavior, social skills and family opportunities for prosocial involvement.

Graduation Rates

Consider the following table which lists the graduation rate for each county. Counties are ordered based on the lowest graduation rates at the top. To compare individual counties to Wyoming as a whole, Wyoming's overall graduation rate has been included in the table and is shaded. Anything above this shaded line has rates that are less than the state average and anything below this shaded line have rates that are higher than the state average.

Table 50. Graduation Rates

County	Graduation Rate
Natrona	70.99%
Laramie	78.00%
Carbon	78.25%
Fremont	78.48%
Sweetwater	81.32%
Wyoming	81.51%
Campbell	81.57%
Hot Springs	82.96%
Johnson	83.53%
Converse	83.67%
Washakie	83.80%
Lincoln	83.95%
Sheridan	84.09%
Albany	84.67%
Platte	85.20%
Uinta	86.12%
Niobrara	86.67%
Sublette	87.01%
Goshen	88.55%
Teton	89.83%
Big Horn	90.62%
Park	90.64%
Weston	94.09%
Crook	96.33%

Question 36.

Based on data in Table 50, how do your graduation rates compare to the Wyoming graduation rates? Is your percentage bigger, smaller, or about the same as the state? Discuss the differences.

Our graduation rate is much better then the states and most of the other counties, we are 4th. This is something that Big Horn County struggles with so the stats were reassuring.

Town Hall Meeting

As part of this needs assessment you will need to conduct a town hall meeting, and in that meeting you will need to find out what the community members feel is unique about your community. In other words, you will need to discuss what individual characteristics in your community might contribute to the misuse of alcohol in your community. Information gathered from this town hall meeting will be used to answer Question 37. A sample protocol for the town hall meeting and ideas on how to gather and analyze qualitative data from this meeting can be found in Appendix C.

Other Local Data

Feel free to consider and analyze other local data that will help you better understand how and to what extent individual factors in your community may influence alcohol-related problems in your community. For example, you may have socio-economic or demographic data that illustrates the differences between individuals in your community and the rest of the state. You may want to include information from alternative schools if there is one in your community. If you have other local data describe the results here.

Individual Factor Questions

Question 37.

Based on information gathered from the PNA, graduation rates, town hall meetings, and other local data, what are the concerns around individual factors that might contribute to the misuse of alcohol and its consequences in your community? Justify your decision.

Our biggest concern is the data that indicates that our student's biggest risk factor is sensation seeking and how a community combats that. Our 12th graders are higher than the state in four categories and it makes one wonder what protective factors need to be in place to help offset those risk factors. Even though it seem our 12th graders are struggling the majority seem to stay on track and make it to graduation.

Question 38.

Based on these considerations, to what degree does your CAC believe individual factors are impacting the misuse of alcohol and its consequences in your community? Justify your decision.

(place an "x" next to a number from 0 to 10)

No impact						Major impact				
0	1	2	3	4	X5	6	7	8	9	10

Prioritization

Task Three:
**Rank the Six Causal Areas from the Greatest Contributor to Your
Community's Problems to the Smallest Contributor**

Prioritizing

The next stage involves prioritizing the causal areas. The first step is achieved by placing the appropriate scores from Questions 14, 20, 24, 27, 33, and 38 next to its related causal area. Based on the scores, rank each causal area with 1 being the highest priority (the area with the highest score) and 6 the lowest. In the case of a tie, decide which area is of higher priority for your community in relation to the misuse of alcohol. After having completed the ranking, justify your prioritization on the next page. Then work with the researchers at WYSAC and your CAC who will help you decide what combination of causal areas would be best to focus on in reducing the misuse of alcohol in your community.

Score	Rank	Causal Area
4	5	Retail Availability
8	2	Criminal Justice
7	3	Social Availability
2	6	Promotion
8	1	Community Norms
5	4	Individual Factors

Question 39.

Justify your prioritization of the causal factors.

Community Norms and Criminal Justice were scored the same, but after debate and discussion it was decided Community Norms was something we could maybe have more of an effect on and in changing. The criminal justice system is a perceived problem with law enforcement and community members, but changing that system will be tough. Social Availability was also scored high as law enforcement was quick to point out that they are only a piece to that solution, it will take a community response to the problem to make any real change happen. Individual Factors were not the same cause for concern as the top three as we were sitting well compared to other communities in our state. Some of the stats were disturbing and if we can somehow address those that would be a great to our students who seem to be struggling with risk factors. Promotion and Retail Availability do not seem to be the biggest factors we have concerning the misuse of alcohol. Alcohol availability is an issue, but it doesn't seem to be coming from liquor establishments.

Resource Assessment

Task Four:
Evaluate the Current Resources Going toward
Each of the Six Causal Areas

Resources

Most grantee communities already do some sort of substance abuse prevention, ranging from implementing school based programs to pursuing policy changes. Therefore, it is important to consider the resources already being used in any of the six causal areas. Complete Table 51 below by listing current strategies and resources being expended within each causal area. Note that these must include some focus upon the prevention of the misuse of alcohol. Resources most often refer to funding but could also refer to other efforts like individual time spent pursuing policy change, dedicated staff, etc. Complete this resource assessment with your Community Advisory Council. You may want to consider certain school or local policies surrounding alcohol.

Table 51. Current Resources and Strategies Focusing upon the Misuse of Alcohol by Causal Area

Causal Area	Strategies	Resources
Retail Availability	Compliance checks	Law enforcement
Criminal Justice	Working with families and youth in trouble with misuse of alcohol	Family Drug Court
Social Availability		
Promotion		
Community Norms		
Individual Factors		

Final Question

Task Five:
**Determine What Combination of Causal Areas Your PF
Project Will Target**

Your Final Conclusions

Now that you have considered the data surrounding your community's alcohol problems, as well as each causal area for these problems, you need to decide what to do. This decision will ultimately be part of your community's PF Strategic Plan and lead to very specific evidence-based strategies for you to implement. For now, think about your data and especially your final rankings on page 66 as well as your resource assessment on page 69. Also, mull over the possible connections among the six causal areas. Would it be possible to target social availability without also targeting community norms? Will changes in retail availability necessarily require changes in the enforcement of policy? Now answer the following question.

Final Needs Assessment Question

Question 40.

It is very unlikely that your community can or needs to address every possible cause or implement every possible evidence-based strategy to change alcohol-related problems. What combination of causal areas is your community going to target with the PF project, and why?

We would like to target community norms and criminal justice if we can identify a project that would allow us to target both of these and have a chance at affecting some kind of change. It was felt that both of these areas needed to be looked at seriously in order for Big Horn County to see some positive outcomes. It would be a success if we could get all law enforcement and criminal justice to just come together and to stop pointing fingers and to formulate a plan for our county. Community Norms continues to be a concern. If we want an attitude change from our youth we will need to see one from the adults.

Appendix B. Law Enforcement Interviews

One method for obtaining data is the face-to-face interview. With this method, you talk to each participant directly. This can be done in the participant's workplace, in your office, or any other suitable place. We recommend that you use a semi-structured interview format. This means that you will ask a set of questions prepared in advance. Clarification to follow-up questions may still be used. By asking general questions and having your participants provide answers in their own words, you may gain more complete information. The interview should be structured, but not so structured that it doesn't allow participants to discuss the misuse of alcohol in the community freely.

Although face-to-face interviews are a valuable way to collect data, they are not without drawbacks. The appearance and demeanor of the interviewer may affect the responses of the participants. Subtle changes in the way an interviewer asks a question may elicit different answers. Also, be aware that the interviewer may not respond similarly to all participants. For example, an interviewer may respond differently to a participant they know versus a participant they've never met before.

The Interviewer

Fundamental to the interview is an interviewer who leads the discussion. This person should feel at ease speaking in a one-on-one conversation. The interviewer's goal is to make the participant feel comfortable in expressing themselves openly while remaining unbiased and keeping the discussion on track. It is recommended that you use someone who has conducted face-to-face interviews before. The interviewer should be able to ask the questions the same way for each participant and be able to read the questions in a neutral manner. The interviewer should also be practiced in active listening techniques that encourage participants to honestly and openly respond to the interview questions.

Choosing the Participants

As part of this needs assessment you will need to conduct interviews of key law enforcement officers. You are encouraged to do at least one interview with the Chief of Police and one with the County Sheriff, but also you should consider what other interviews would be most appropriate and informative for your community. In addition to the law enforcement interviews, you may want to interview emergency room staff, alcohol treatment providers, or community leaders. One thing to consider when you choose your participants may include the length of time they have held their current position. Be careful not to choose someone who is too new to be able to accurately answer your questions. The interviewer should keep in mind the questions they are trying to answer, and they should feel creative in how they choose participants.

Conducting the Interview

The interview should last about 30 minutes and follow a semi-structured format. Only the interviewer and the participant should be present during the interview, and the interviewer should make sure the interview is being conducted in a private location where others cannot hear the conversation. The interviewer should ask the questions and let the participant respond without interrupting. The interviewer should allow the participant to talk freely but not ramble about unrelated issues. The interviewer should make every attempt to find a balance between keeping the conversation on track and allowing it to flow naturally. To accomplish this, a “funnel” structure is often used. This approach is best outlined as a series of questions that move from general to specific.

Introductory Questions

These are questions that introduce the topic for discussion. They should make the participant feel at ease with the interviewer. Usually they are not critical to the research; rather, they are intended to foster conversation and get the participant to start thinking about the topic.

Key Questions

These are questions that drive the research. Their answers provide the best data for later analysis. They should be focused on the topic of interest and open-ended. The interviewer’s goal with these questions is to illicit open responses from the participant. You should avoid both questions that allow for short answers and questions that can be answered with a “yes” or “no.”

Ending Questions

These questions bring closure to the discussion and enable the participant to look back upon previous comments. The participant should be asked to summarize their thoughts in some way.

Sample Questions You May Choose to Use for Your Interviews

Introductory Questions:

What alcohol-related problems do you see in our community?

What factors do you believe are causing these problems?

Key Questions:

What percent of arrests are a result of alcohol-related offenses in our community?

What percent of convictions are a result of alcohol-related offenses in our community?

How many alcohol-related offenses do you think go undetected in our community?

(The answers to the following four questions should be submitted to WYSAC no later than April 30, 2007)

Are any officers assigned specifically to alcohol-related issues or offenses in our community?

How many officers are assigned?

What does their work consist of?

What special training do officers have in order to deal with alcohol-related offenses?

Do you hold sobriety check points?

How many sobriety check points were held in 2006?

How many drivers were tested?

How many positive BAC levels were obtained?

Where were the sobriety check points held?

Have you conducted any compliance checks for sales to intoxicated patrons?

How many compliance checks for sales to intoxicated patrons were conducted in 2006?

What else are law enforcement officers doing around the misuse of alcohol in our community?

What aren't law enforcement officers doing around the misuse of alcohol in our community?

What locations are known for alcohol-related incidents?

Are there particular people that are known for repeated alcohol-related incidents? If yes, what do you do to keep track or work with those people?

How do you think law enforcement could better address the alcohol-related problems in our community?

Ending Questions:

How do you think the criminal justice system is helping reduce the alcohol problems in our community?

How do you think concerns in the criminal justice system are contributing to the alcohol problems in our community?

Our goal is to find out what the driving factor is that is causing the misuse of alcohol in our community. Is there anything you would like to add or do you have any final comments?

Thank you for your time and input.

Recording and Using the Information

In addition to taking notes, every effort should be made to record the law enforcement interview, but first you should seek permission from your participant. The use of recording equipment is important because it will allow you revisit the conversation and will also allow you to pull direct quotes made by the participant. This discussion can also be transcribed or at least listened to for quotes and general ideas. We suggest using a data matrix like the one found on the next page to keep track of major themes and quotes from the discussion.

The information gathered from these interviews should be used to compliment other quantitative work by the use of participant quotes and the grouping of ideas. The grouping of ideas refers to the categorizing of attitudes, feelings, or beliefs of the participant toward the topic. This may simply involve discussions revolving around a single question. In other cases this may involve outlining the major topics brought up during the interview.

Appendix C. Town Hall Meeting Protocol

Holding a town hall meeting is an efficient way to gather qualitative data through the use of a focused group discussion. The reward for this work is dynamic information not just about what people feel, but about *why* people feel the way they do about a particular subject or idea. Group discussions have the potential to provide data with both accuracy and depth.

The town hall meeting is intended as a compliment to the rest of the needs assessment. What follows is a discussion of the general system for running a town hall meeting successfully.

The Moderator

Fundamental to the town hall meeting is a moderator who facilitates the discussion. This person should feel at ease speaking in front of the group, but he or she is not a teacher. The moderator's goal is to make the participants feel comfortable in expressing themselves openly while keeping the discussion on track.

Becoming a talented moderator takes practice. For most novices the best strategy is to play the role of a *seeker of wisdom*. This role assumes that the participants have the wisdom you need and will share it if asked the right questions.

Most importantly, moderators must learn to listen and not talk.

Choosing the Participants

You can do one town hall meeting or a series of meetings. These meetings should consist of at least 10 people who either volunteer to come or who you have chosen specifically. Most meetings are made up of a homogeneous group of strangers, but don't be afraid to invite specific individuals to attend the meeting. Key participants may include a community member, a police officer, a parent, an adolescent, someone from your advisory council, a bar owner, and any other individuals who may have insight on the topic.

Setting the Rules

Prior to starting the discussion, the moderator should lay down a few ground rules. Generally, these include, only one person talking at a time; no side discussions among participants; no member should be put down because of their opinions; all thoughts and ideas are valued; and there are no wrong or right answers. Like with selection of group members, care and creativity should be used when setting rules.

Conducting the Discussion

The discussion itself should last between 1 and 2 hours and follow a structured format. The moderator should make every attempt to find a balance between keeping the group discussion

on track and allowing it to flow naturally. In order to accomplish this, a “funnel” structure is often used. This approach is best outlined as a series of questions that move from general to specific.

Opening Question

This is a “round robin” question that everyone answers at the beginning of the meeting. It is designed to be answered quickly and to identify those characteristics that participants have in common. It should make everyone in the group feel more at ease.

Introductory Questions

These are questions that introduce the topic for discussion. Usually they are not critical to the research; rather, they are intended to foster conversation and interaction among the participants.

Key Questions

These are questions that drive the research. Their answers provide the best data for later analysis. They should be focused on the topic of interest and open-ended. The moderator’s goal with these questions is to illicit discussion among the participants. You should avoid both questions that allow for short answers and questions that can be answered with a “yes” or “no.”

Ending Questions

These questions bring closure to the discussion and enable participants to look back upon previous comments. Once again a “round robin” approach is best, and participants should be asked to summarize their thoughts in some way.

Sample Protocol You May Choose to Use for Your Town Hall Meeting(s)

Opening Question:

Tell us your name and what brought you here today. (Round Robin)

Introductory Questions:

What are the alcohol-related problems in our community?

What factors are causing these problems?

A number of alcohol-related concerns and possible causes for those concerns have been mentioned. Let's think about three possible causes of alcohol misuse in particular. For the remainder of this discussion, let's think about social availability, community norms and individual factors.

Key Questions

Let's start with social availability. Social availability refers to the procurement of alcohol through social sources such as friends and family.

Where are the youth in our community getting alcohol? Give examples.

Where are high school aged youth and younger getting alcohol?

Where are minors out of high school getting alcohol?

Where do adults in the community obtain alcohol?

Where is the alcohol consumed? For youth and adults?

What are your experiences with underage drinking at parties, or with adults providing alcohol to minors?

There's been a lot of talk about the misuse of alcohol as a problem in our community, but to what extent do you think *social availability* really contributes to the problem? (Round Robin).

Next, let's talk about community norms. Community norms reflect general attitudes about alcohol use and societal expectations regarding the level and type of use that is considered appropriate.

What are the norms of our community?

What are the general attitudes about drinking in our community?

What is the alcohol culture like?

In our community, is it okay to serve alcohol to a minor and if so, under what circumstances?

In our community, at what age is it acceptable to use alcohol?

What is our community's attitude toward drinking and driving?

What kind of groups or organizations promote the use of alcohol in our community?

Now that we've had this discussion, to what extent do you think *community norms* contribute to the misuse of alcohol in our community? (Round Robin)

Lastly, let's think about individual factors. Individual factors could be biological, socio-economic, or individual attitudes.

What makes the people in our community different and unique?

What individual characteristics contribute to the misuse of alcohol in our community?

Based on the things we've just talked about, to what degree do you think the *individual characteristics* of the people in our community are a cause of the misuse of alcohol? (Round Robin)

Ending Question:

Considering the three causes that we've talked about today, social availability, community norms, and individual factors, which one is the leading cause of the misuse of alcohol in our community? (Round Robin)

Our goal is to find out what is contributing to the misuse of alcohol in our community. Have we missed anything? Do you have any final comments?

Thank the participants for coming.

Recording and Using the Information

Every effort should be made to record the town hall meeting by having a colleague take notes and through the use of a tape or video recorder. The use of recording equipment allows the meeting to be revisited when needed. This discussion can also be transcribed or at least listened to for quotes and general ideas. We suggest using a data matrix like the one found on the next page to keep track of major themes and quotes from the discussion. Feel free to expand the table as needed.

The information gathered from this meeting should be used to compliment other quantitative work by the use of participant quotes and the grouping of ideas. The grouping of ideas refers to the categorizing of attitudes, feelings, or beliefs of the group toward the topic. This may simply involve discussions revolving around a single question. In other cases this may involve outlining the major topics brought up by the group.
